## FOREWORD

#### The Canadian Council of Directors of Apprenticeship (CCDA) recognizes this Red Seal Occupational Standard (RSOS) as the Red Seal standard for the Insulator (Heat and Frost) trade.

#### **Background**

The first National Conference on Apprenticeship in Trades and Industries, held in Ottawa in 1952, recommended that the federal government be requested to cooperate with provincial and territorial apprenticeship committees and officials in preparing analyses of a number of skilled occupations. Employment and Social Development Canada (ESDC) sponsors the Red Seal Program, which, under the guidance of the CCDA, develops a national occupational standard for each of the Red Seal trades.

Standards have the following objectives:

- to describe and group the tasks performed by skilled workers;
- to identify which tasks are performed in every province and territory;
- to develop instruments for use in the preparation of Interprovincial Red Seal Examinations and assessment tools for apprenticeship and certification authorities;
- to develop common tools for apprenticeship on-the-job and technical training in Canada;
- to facilitate the mobility of apprentices and skilled workers in Canada;
- to supply employers, employees, associations, industries, training institutions and governments with analyses of occupations.

Any questions, comments, or suggestions for changes, corrections, or revisions to this standard or any of its related products may be forwarded to:

Trades and Apprenticeship Division Apprenticeship and Regulated Occupations Directorate Employment and Social Development Canada 140 Promenade du Portage, Phase IV, 6th Floor Gatineau, Quebec K1A 0J9 Email: <u>redseal-sceaurouge@hrsdc-rhdcc.gc.ca</u>

## ACKNOWLEDGEMENTS

The CCDA and ESDC wish to express sincere appreciation for the contribution of the many tradespersons, industrial establishments, professional associations, labour organizations, provincial and territorial government departments and agencies, and all others who contributed to this publication.

Special thanks are offered to the following representatives who contributed greatly to the original draft of the standard and provided expert advice throughout its development:

Roderick Alberton	Saskatchewan
Jeremy Carlson	Manitoba
Richard Chartrand	Quebec
Carey Chutskoff	Saskatchewan
David Gardner	Ontario
Robert Gray	Manitoba
Neil Holatko	Alberta
Ken Jakobsson	British Columbia
Todd Lewis	British Columbia
Alyre Malley	Nova Scotia
Adam Melnick	Ontario
Robert Robertson	Alberta
Joshua Sherrard	New Brunswick
George Thompson	British Columbia
Matthew Walsh	Newfoundland and Labrador
James Whitenect	New Brunswick
Michael Wilson	Ontario

This standard was prepared by the Apprenticeship and Regulated Occupations Directorate of ESDC. The coordinating, facilitating and processing of this standard were undertaken by employees of the standards development team of the Trades and Apprenticeship Division and of British Columbia, the host jurisdiction for this trade.

## STRUCTURE OF THE OCCUPATIONAL STANDARD

To facilitate understanding of the occupation, this standard contains the following sections:

**Description of the Insulator (Heat and Frost) trade:** An overview of the trade's duties, work environment, job requirements, similar occupations and career progression

Trends in the Insulator (Heat and Frost) trade: Some of the trends identified by industry as being the most important for workers in this trade

Essential Skills Summary: An overview of how each of the 9 essential skills is applied in this trade

**Industry Expected Performance:** description of the expectations regarding the level of performance of the tasks, including information related to specific codes, regulations and standards that must be observed

Language Requirements: description of the language requirements for working and studying in this trade in Canada

**Pie Chart:** a graph which depicts the national percentages of exam questions assigned to the major work activities

**Task Matrix and Examination Weightings:** a chart which outlines graphically the major work activities, tasks and sub-tasks of this standard and their respective exam weightings

Major Work Activity (MWA): the largest division within the standard that is comprised of a distinct set of trade activities

Task: distinct actions that describe the activities within a major work activity

Task Descriptor: a general description of the task

Sub-task: distinct actions that describe the activities within a task

Essential Skills: The most relevant essential skills for this sub-task

Skills:

**Performance Criteria:** description of the activities that are done as the sub-task is performed

**Evidence of Attainment:** proof that the activities of the sub-task meet the expected performance of a tradesperson who has reached journeyperson level

#### Knowledge:

**Learning Outcomes:** describes what should be learned relating to a sub-task while participating in technical or in-school training

**Learning Objectives:** topics to be covered during technical or in-school training in order to meet the learning outcomes for the sub-task

**Range Variables:** elements that provide a more in-depth description of a term used in the performance criteria, evidence of attainment, learning outcomes, or learning objectives

Appendix A - Acronyms: a list of acronyms used in the standard with their full name

Appendix B – Tools and Equipment: a non-exhaustive list of tools and equipment used in this trade

Appendix C - Glossary: definitions or explanations of selected technical terms used in the standard

A complete version of the occupational standard, which provides additional detail for the trade activities, skills and knowledge can be found at <u>www.red-seal.ca</u>.

## DESCRIPTION OF THE INSULATOR (HEAT AND FROST) TRADE

"Insulator (Heat and Frost)" is this trade's official Red Seal occupational title approved by the CCDA. This standard covers tasks performed by an insulator (heat and frost) whose occupational title has been identified by some provinces and territories of Canada under the following names:

	NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
Heat and Frost Insulator													
Insulator													
Insulator (Heat and Frost)													

Insulators (heat and frost) work with different kinds of insulating material to prevent or reduce the passage of heat, cold, vapour, moisture, sound or fire. They read and interpret drawings and specifications to determine insulation requirements, select the amount and type of insulation to be installed, and measure and cut insulating material to the required dimensions. They then apply, install, repair and maintain insulating material. Insulated surfaces may be finished with materials such as plastics, aluminum, galvanized steel and coated steel, stainless steel, canvas, mastic laminate or finishing cement. Insulators (heat and frost) also lay out and fabricate parts on-site, or remove or seal off old insulation.

Types of insulating materials that may be used include calcium silicate, ceramic fibre, elastomeric foam, nano-like technology, mineral fibre, fibreglass, polyurethane, polystyrene and cellular glass. They may be used for systems such as plumbing, air-handling, exhaust, heating, cooling and refrigeration, for piping equipment, pressure vessels and storage tanks, as well as for walls, floors and ceilings of buildings, industrial complexes and ships.

Removing old insulating material such as asbestos, ceramic fibres, lead and mould is also part of the trade. Special training and licenses may be required to deal with these types of materials. Spraying insulating materials and installing fireproofing and fire stop systems are also specialized parts of the trade.

Insulators (heat and frost) are employed by governments, construction companies, insulation contractors and industrial plants, or may also be self-employed. They work on residential, industrial, commercial and institutional projects. Their work schedules depend on the type of work they are doing, ranging from regular work weeks, to shift work or irregular work hours. Schedules may depend on the availability of contracts, or inconvenience or health risks to adjacent workers or the public.

Insulators (heat and frost) work with a number of hand tools and power tools. They use personal protective equipment to protect themselves from workplace hazards. Also, they frequently use scaffolds, aerial lifts and ladders to help them accomplish their tasks. They can work indoors or outdoors, often in extreme temperatures. They may perform some of their tasks in confined spaces. Depending on the location of work, they may be required to travel.

The ability to be focused and responsible is a vital part of insulators' (heat and frost) work and safety. The work often requires the insulators (heat and frost) to spend most of the day on their feet, bending, kneeling, working at heights, climbing (scaffolds, ladders) and lifting. Insulators (heat and frost) must be able to use their body to brace large items and guide objects or materials into place. This requires them to have a good combination of motor co-ordination, and manual and finger dexterity.

This standard recognizes similarities or overlaps with the work of boilermakers, roofers, sheet metal workers, painters and carpenters.

With experience, insulators (heat and frost) act as mentors and trainers to apprentices in the trade. They can also move into positions such as maintenance, instructor, contractor, foreperson, superintendent or estimator.

## TRENDS IN THE INSULATOR (HEAT AND FROST) TRADE

#### **Materials**

There are new insulating materials being introduced such as aluminum impregnated insulation, nano-like technology and wicking type insulation. Endothermic sheets for fireproofing electrical trays are being used more and more frequently. Their application and maintenance requires that insulators (heat and frost) stay up-to-date. More prefabricated materials have emerged, but insulators are still required to do layout and fabrication on-site.

#### **Tools and equipment**

Many tools have become more technologically advanced. For example, there are more electric and power fabrication tools such as electric rollers and shears. Computer Numerical Control (CNC) machines may become more common in this industry for the fabrication of metal fittings.

#### Safety and environmental considerations

Workplace safety is increasingly being driven by government regulations. Training and certification for asbestos removal is becoming prevalent in many jurisdictions. Due to growing concerns for the environment, there is an increased demand by clients for the use of insulation for energy saving purposes and environmentally friendly products such as low volatile organic compound (VOC) products. Mechanical insulation plays a large role in efforts to lower carbon emissions to net zero. This is driving an increased use of environmentally friendly mechanical insulation and products. This can also help in Leadership in Energy and Environmental Design (LEED) certification.

Changes in building codes have had a large impact on energy conservation and the work of insulators (heat and frost).

## **ESSENTIAL SKILLS SUMMARY**

Essential skills are needed for work, learning and life. They provide the foundation for learning all other skills and enable people to evolve with their jobs and adapt to workplace change.

Through extensive research, the Government of Canada and other national and international agencies have identified and validated nine essential skills. These skills are used in nearly every occupation and throughout daily life in different ways.

A series of CCDA-endorsed tools have been developed to support apprentices in their training and to be better prepared for a career in the trades. The tools can be used independently or with the assistance of a tradesperson, trainer, employer, teacher or mentor to:

- understand how essential skills are used in the trades;
- learn about individual essential skills strengths and areas for improvement; and
- improve essential skills and increase success in an apprenticeship program.

Tools are available online or for order at: <u>https://www.canada.ca/en/employment-social-development/programs/essential-skills/profiles.html</u>.

The application of these skills may be described throughout this document within the competency statements which support each subtask of the trade. The following are summaries of the requirements in each of the essential skills, taken from the essential skills profile. A link to the complete essential skills profile can be found at: <u>www.red-seal.ca</u>.

## READING

Insulators (heat and frost) use reading skills to read manuals and details of job specifications such as material lists. They read safety notices, work permits, safety regulations and emergency procedures in order to maintain a safe work environment.

## **DOCUMENT USE**

Documents that insulators (heat and frost) work with include material lists, Workplace Hazardous Materials Information System (WHMIS) sheets and labels, instructions, work orders, reports, dispatch sheets and memos. They may also consult and interpret blueprints, specifications and permits, and complete logbooks.

## WRITING

Insulators (heat and frost) write lists of materials and instructions. They may write hazard assessments, accident reports or keep work records for themselves and apprentices.

## **ORAL COMMUNICATION**

Insulators (heat and frost) use oral communication skills during daily or weekly toolbox meetings with coworkers and supervisors to discuss job details. They also meet with workers from other trades to coordinate work. Oral communication skills are important when training apprentices.

## NUMERACY

Insulators (heat and frost) use numeracy skills for measuring and cutting insulation, and determining thickness of insulation for pipes, ducts and equipment. They use formulas for calculating surface areas of frustrums, cones, and regular and irregular shapes to estimate required materials. They also use formulas to determine the thickness of insulation. They may need to convert between metric and imperial measurements.

## THINKING

Problem solving skills are used by insulators (heat and frost) to anticipate and deal with situations such as materials not arriving as scheduled, unplanned shortages, or the wrong materials being delivered. Every job is different and often plans change requiring insulators (heat and frost) to adapt to the current requirements. Insulators (heat and frost) use their decision making skills when dealing with various issues such as where to make cuts so the material can be formed to the required shape and how to accurately cut the material to avoid waste.

## **DIGITAL TECHNOLOGY**

Computers may be used by insulators (heat and frost) for tasks such as accessing specifications and blueprints (Computer Assisted Drawing [CAD]), receiving work orders and for the delivery of safety training. They use digital measuring equipment such as heat guns and thermal imaging cameras, and software such as energy loss assessment. Internet-based applications are also commonly used for research and documentation.

## **WORKING WITH OTHERS**

Insulators (heat and frost) mostly work independently. They co-ordinate their work with other workers onsite including apprentices, journeypersons, supervisory personnel and workers from other trades depending on the size of the work site and the type of work.

## **CONTINUOUS LEARNING**

There is an ongoing requirement to learn while working as an insulator (heat and frost). Work sites and companies may have different protocols. Applications, materials and processes are continually changing and skills need to be kept up-to-date.

## **INDUSTRY EXPECTED PERFORMANCE**

All tasks must be performed according to the applicable jurisdictional regulations and standards. All health and safety standards must be respected and observed. Work should be performed efficiently and at a high quality while minimizing material waste and environmental damage. All requirements of the manufacturer and client specifications must be met. At a journeyperson level of performance, all tasks must be completed with minimal direction and supervision. As a journeyperson progresses in their career there is an expectation they continue to upgrade their skills and knowledge to keep pace with industry and promote continuous learning in their trade through mentoring of apprentices.

## LANGUAGE REQUIREMENTS

It is expected that journeypersons are able to understand and communicate in either English or French, which are Canada's official languages. English or French are the common language of business as well as language of instruction in apprenticeship programs.

## PIE CHART OF RED SEAL EXAMINATION WEIGHTINGS

MWA A	Performs Common Occupational Skills	12%
MWA B	Performs Industrial Applications	31%
MWA C	Performs Commercial Applications	30%
MWA D	Performs Applications Common to Industrial and Commercial	12%
MWA E	Performs Specialized Applications	9%
MWA F	Performs Asbestos, Lead and Mould Abatement	6%

This pie chart represents a breakdown of the interprovincial Red Seal examination. Percentages are based on the collective input from workers from the trade from across Canada. The Task Matrix on the next pages indicates the breakdown of tasks and sub-tasks within each Major Work Activity and the breakdown of questions assigned to the Tasks. Interprovincial examinations typically have between 100 and 150 questions.

## **INSULATOR (HEAT AND FROST) TASK MATRIX**

## A - Performs routine occupational skills

\_\_\_\_

г

Task A-1 Performs safety-related functions 16%	A-1.01 Uses personal protective equipment (PPE) and safety equipment	A-1.02 Maintains safe work environment	
Task A-2 Uses and maintains tools and equipment 20%	A-2.01 Uses tools and equipment	A-2.02 Uses access equipment	
Task A-3 Organizes work 17%	A-3.01 Performs task scheduling	A-3.02 Organizes materials on site	
Task A-4 Uses communication and mentoring techniques 10%	A-4.01 Uses communication techniques	A-4.02 Uses mentoring techniques	
Task A-5 Performs routine trade practices 37%	A-5.01 Performs measurements and calculations	A-5.02 Interprets specifications and drawings	A-5.03 Prepares substrates

## **B** - Performs industrial applications

Task B-6 Prepares for installation of insulation in industrial applications 2 <b>1%</b>	B-6.01 Selects materials for industrial applications	B-6.02 Performs layout for industrial applications	
Task B-7 Insulates piping and fittings 41%	B-7.01 Installs insulation on piping, fittings and hangers	B-7.02 Applies vapour barrier on piping and fittings	B-7.03 Installs cladding, jacketing and finishes on piping and fittings
Task B-8 Insulates tanks, vessels and equipment 33%	B-8.01 Installs insulation on tanks, vessels and equipment	B-8.02 Applies vapour barrier on tanks, vessels and equipment	B-8.03 Installs cladding, jacketing and finishes on tanks, vessels and equipment

## **C** - Performs commercial applications

Task C-9 Prepares for installation of insulation in commercial applications 14%	C-9.01 Selects materials for commercial applications	C-9.02 Performs layout for commercial applications	
Task C-10 Insulates plumbing and mechanical piping systems 36%	C-10.01 Installs insulation on plumbing and mechanical piping systems	C-10.02 Applies vapour barrier on insulated plumbing and mechanical piping systems	C-10.03 Installs cladding, jacketing and finishes on insulated plumbing and mechanical piping systems
Task C-11 Insulates mechanical ducting 27%	C-11.01 Installs insulation on mechanical ducting	C-11.02 Applies vapour barrier on insulated mechanical ducting	C-11.03 Installs cladding, jacketing and finishes on insulated mechanical ducting
Task C-12 Insulates mechanical equipment 23%	C-12.01 Installs insulation on mechanical equipment	C-12.02 Applies vapour barrier on insulated mechanical equipment	C-12.03 Installs cladding, jacketing and finishes on insulated mechanical equipment

# D - Performs applications common to industrial and commercial systems

Task D-13 Installs fire stop systems 31%	D-13.01 Identifies approved fire stop system	D-13.02 Applies fire stop materials to architectural, structural, mechanical and electrical components	
Task D-14 Insulates for soundproofing 17%	D-14.01 Insulates piping for soundproofing	D-14.02 Insulates turbines, equipment and mechanical systems for soundproofing	D-14.03 Fabricates acoustic panels (Not Common Core)
	D-14.04 Installs acoustic panels to ceilings and walls (Not Common Core)		
Task D-15 Installs removable covers 37%	D-15.01 Fabricates removable covers	D-15.02 Fastens removable covers	
Task D-16 Installs underground insulating systems 15%	D-16.01 Installs pipe insulation to underground systems	D-16.02 Installs pour-in-place and spray-on insulation to underground systems	

## **E** - Performs specialized applications

Task E-17 Sprays sealers, coatings and spray-on insulation 21%	E-17.01 Protects surrounding work area for spraying	E-17.02 Prepares material, equipment and substrate for spraying	E-17.03 Installs reinforcing material for spraying
	E-17.04 Applies spray-on insulation, coatings and sealers		
Task E-18 Installs fireproofing 20%	E-18.01 Applies fireproofing to architectural, structural, mechanical and electrical components	E-18.02 Applies protective covering to fireproofing materials	
Task E-19 Installs insulation for refractory systems 23%	E-19.01 Applies insulation to refractory systems	E-19.02 Installs reflective systems	E-19.03 Installs cladding, jacketing and finishes to refractory systems
Task E-20 Installs insulation for cryogenic systems 36%	E-20.01 Applies insulation to cryogenic systems	E-20.02 Applies vapour barrier to insulated components of cryogenic systems	E-20.03 Installs cladding, jacketing and finishes to cryogenic systems
Task E-21 Insulates for marine applications (Not Common Core)	E-21.01 Insulates bulkheads, deckheads and hulls (Not Common Core)	E-21.02 Installs cladding, jacketing and finishes on marine applications (Not Common Core)	

## F - Performs asbestos , lead and mould abatement

Task F-22 Prepares for asbestos abatement 32%	F-22.01 Determines required personal protective equipment (PPE) for asbestos abatement	F-22.02 Retrieves sample of asbestos for testing	F-22.03 Determines scope of work
	F-22.04 Prepares site for removal and containment of asbestos	F-22.05 Builds temporary enclosure	
Task F-23 Performs asbestos removal procedures 39%	F-23.01 Removes asbestos	F-23.02 Disposes of asbestos materials	F-23.03 Performs decontamination of area and equipment
Task F-24 Performs maintenance and repair 18%	F-24.01 Encapsulates asbestos	F-24.02 Encloses asbestos	
Task F-25 Performs lead abatement and mould remediation 11%	F-25.01 Performs lead abatement	F-25.02 Performs mould remediation	

## MAJOR WORK ACTIVITY A Performs Routine Occupational Skills

## **TASK A-1 Performs safety-related functions**

## **TASK DESCRIPTOR**

Insulators (heat and frost) use and maintain personal protective equipment (PPE) and safety equipment. Maintaining a safe work environment is crucial.

## A-1.01 Uses personal protective equipment (PPE) and safety equipment

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	yes	NV	NV	NV						

	SK	ILLS
	Performance Criteria	Evidence of Attainment
A-1.01.01P	select <b>PPE</b> and <b>safety equipment</b>	<b>PPE</b> and <b>safety equipment</b> are selected according to project requirements and limitations of <b>PPE</b> and <b>safety equipment</b>
A-1.01.02P	inspect and ensure <i>PPE</i> and <i>safety</i> <i>equipment</i> are in good working condition before each use	<b>PPE</b> and <b>safety equipment</b> are inspected and in good working condition before each use
A-1.01.03P	verify <b>PPE</b> has been cleaned before each use	PPE is cleaned before each use
A-1.01.04P	remove and report unsafe, worn, damaged or defective <i>PPE</i> and <i>safety</i> <i>equipment</i>	unsafe, worn, damaged or defective <b>PPE</b> and <b>safety equipment</b> are reported and removed from service
A-1.01.05P	inspect and perform a positive and negative field test before wearing a respirator	respirator is inspected, and positive and negative field tests are performed before each use
A-1.01.06P	ensure fit test is up-to-date to accommodate changes in <i>face structure</i>	fit test is up-to-date to accommodate changes in <i>face structure</i>
A-1.01.07P	adjust <b>PPE</b>	<b>PPE</b> is adjusted to ensure coverage and protection

## **RANGE OF VARIABLES**

**PPE** includes: eye protection, gloves, boots, respirators, hearing protection, fall protection equipment, hard hats, wristlets, coveralls (for additional PPE, see Appendix B)

*safety equipment* includes: warning tapes, first aid kits, eye wash stations, fire extinguishers (for additional safety equipment, see Appendix B)

*face structure* includes: facial hair, weight change, broken nose, abscessed tooth, plastic surgery *specifications* include: manufacturers', Canadian Standards Association (CSA), company policies, jurisdictional, safety certifications

	KNOWLEDGE					
	Learning Outcomes	Learning Objectives				
A-1.01.01L	demonstrate knowledge of <b>PPE</b> and <b>safety equipment</b> , their applications, maintenance and procedures for use	identify types of <b>PPE</b> and describe their applications and procedures for use				
		identify types of <i>safety equipment</i> and describe their applications and procedures for use				
		identify the procedures used to inspect, maintain and store <i>PPE</i> and <i>safety</i> <i>equipment</i>				
A-1.01.02L	demonstrate knowledge of regulations pertaining to <b>PPE</b> and <b>safety equipment</b>	identify jurisdictional health and safety acts and regulations pertaining to <b>PPE</b> and <b>safety equipment</b>				

## **RANGE OF VARIABLES**

**PPE** includes: eye protection, gloves, boots, respirators, hearing protection, fall protection equipment, hard hats, wristlets, coveralls (for additional PPE, see Appendix B)

*safety equipment* includes: warning tapes, first aid kits, eye wash stations, fire extinguishers (for additional safety equipment, see Appendix B)

### A-1.02

## Maintains safe work environment

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	yes	NV	NV	NV						

	SK	ILLS
	Performance Criteria	Evidence of Attainment
A-1.02.01P	verify <b>work permits</b>	work permits required for the project are verified
A-1.02.02P	perform a field-level risk assessment of worksite for <b>hazards</b> and locate emergency eye wash, first aid stations, fire extinguishers, escape plan and muster points	field-level risk assessment of worksite is performed to identify <b>hazards</b> and locate emergency eye wash, first aid stations, fire extinguishers, escape plan and muster points are located
A-1.02.03P	remove or mitigate <i>hazards</i>	hazards are removed or mitigated according to field level risk assessment
A-1.02.04P	report <i>hazards</i> , near misses and incidents immediately	<i>hazards</i> , near misses and incidents are reported immediately to supervisor
A-1.02.05P	lock out and tag out machinery, equipment and process	machinery, equipment and process are locked out and tagged out to de-energize system according to <i>company policies</i> <i>and procedures</i>
A-1.02.06P	comply with all <i>regulations, policies and procedures</i> in the workplace	regulations, policies and procedures are complied with
A-1.02.07P	set up and remove <i>barriers</i>	<b>barriers</b> are set up to cordon off work area and removed upon completion of work according to jurisdictional authority and project requirements

#### **RANGE OF VARIABLES**

*work permits* include: confined space, hot work, safe work, cold work, blanket (general access) *hazards* include: pinch points, tripping hazards, chemical hazards, electric shock hazards, burn hazards, noise hazards, height hazards, respiratory hazards, environmental hazards

*company policies and procedures* include: evacuation routes, muster stations, warning signals, incident procedures, emergency phone numbers, location of safety equipment, lock-out procedures *regulations, policies and procedures* include: housekeeping, emergency and evacuation, disposal of materials, muster station, fire watch and man watch requirements, safe work practices and procedures,

jurisdictional health and safety acts and regulations

barriers include: "caution" tape, "do not enter" tape, "asbestos" tape

	KNO	WLEDGE
	Learning Outcomes	Learning Objectives
A-1.02.01L	demonstrate knowledge of safe work practices	identify <i>hazards</i> and describe safe work practices
		identify <i>company policies and</i> <i>procedures</i> pertaining to safe work practices
		describe safety watch requirements
		identify company or site-specific safety training requirements
		describe housekeeping practices related to safe work practices
A-1.02.02L	demonstrate knowledge of regulations pertaining to safety	identify required work permits
		identify and implement jurisdictional health and safety acts and regulations pertaining to safe work practices

### **RANGE OF VARIABLES**

*hazards* include: pinch points, tripping hazards, chemical hazards, electric shock hazards, burn hazards, noise hazards, height hazards, respiratory hazards, environmental hazards

*company policies and procedures* include: evacuation routes, muster stations, warning signals, incident procedures, emergency phone numbers, location of safety equipment, lock-out procedures *safety watch* includes: fire watch, man watch

*training requirements* include: fall protection, confined space entry, asbestos awareness, Workplace Hazardous Materials Information System (WHMIS), H<sub>2</sub>S awareness, rigging and hoisting, lift training, lock-out procedures

work permits include: confined space, hot work, safe work, cold work, blanket (general access)

## **TASK A-2** Uses and maintains tools and equipment

## **TASK DESCRIPTOR**

Insulators (heat and frost) use and maintain tools and equipment in a safe and proper manner. They use access equipment according to the task at hand.

## A-2.01 Uses tools and equipment

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	yes	NV	NV	NV						

	St	KILLS
	Performance Criteria	Evidence of Attainment
A-2.01.01P	maintain tools and equipment	tools and equipment are inspected for damage and wear
A-2.01.02P	recognize, replace and report worn, damaged or defective tools and equipment	worn, damaged or defective tools and equipment are reported and replaced according to manufacturers' specifications, site-specific requirements and company policies
A-2.01.03P	clean and lubricate tools and equipment	tools and equipment are cleaned and lubricated according to manufacturers' specifications
A-2.01.04P	sharpen tools	tools are sharpened according to tool characteristics
A-2.01.05P	organize and store tools and equipment	tools and equipment are organized and stored to protect them from the elements and ensure easy retrieval
A-2.01.06P	select tools and equipment for project	tools and equipment are selected and used according to their intended design

	KNOWLEDGE				
	Learning Outcomes	Learning Objectives			
A-2.01.01L	demonstrate knowledge of tools and equipment, their applications, maintenance and procedures for use	identify types of tools and equipment, and describe their application and procedures for use

		implement codes and regulations pertaining to the use of <i>access equipment</i>
		describe the procedures used to inspect and maintain <i>access equipment</i>
		identify jurisdictional regulations, limitations and training requirements for <i>access equipment</i>
		describe the procedures used to erect, level and dismantle scaffolding
		describe the procedures used to store and secure <b>access equipment</b>

## **RANGE OF VARIABLES**

*access equipment* includes: step ladders, extension ladders, aerial platforms, scissor lifts, crane baskets, scaffolding, rope access equipment

hazards include: overhead obstructions, environmental conditions, falls, pinch points, dropped objects

## **TASK A-3 Organizes work**

## **TASK DESCRIPTOR**

Insulators (heat and frost) plan their daily tasks according to the project specifications. They organize the materials, tools and equipment for storage and easy retrieval.

## A-3.01 Performs task scheduling

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	YT	NU
yes	yes	NV	yes	NV	NV	NV						

	SK	SKILLS					
	Performance Criteria	Evidence of Attainment					
A-3.01.01P	organize and prioritize daily tasks	daily tasks are organized and prioritized according to <i>factors</i>					
A-3.01.02P	determine work effort remaining	remaining work effort is determined according to project requirements					
A-3.01.03P	coordinate work tasks with other trades	work tasks are coordinated with other trades					
A-3.01.04P	determine tools and equipment required	tools and equipment are determined according to project requirements and availability					

## **RANGE OF VARIABLES**

*factors* include: project requirements, safety considerations, field-level risk assessments, contractors' requirements, environmental conditions, work in progress (WIP) log

	KNOW	LEDGE
	Learning Outcomes	Learning Objectives
A-3.01.01L	demonstrate knowledge of the procedures to plan and schedule tasks	identify <i>factors</i> to consider when planning and scheduling daily tasks
		identify sequence of task activities
		describe procedures for coordinating work tasks with other trades
		identify work order, work release and safe work permit procedures
		identify types, sizes and amounts of materials required for each project

### **RANGE OF VARIABLES**

*factors* include: project requirements, safety considerations, field-level risk assessments, contractors' requirements, environmental conditions, work in progress (WIP) log

## A-3.02

## Organizes materials on site

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	yes	NV	NV	NV						

		SKILLS
	Performance Criteria	Evidence of Attainment
A-3.02.01P	sort and place materials	materials are sorted and placed according to <i>factors</i>
A-3.02.02P	store and secure materials	materials are stored and secured in designated areas considering <i>factors</i>
A-3.02.03P	dispose of waste materials	waste materials are disposed of according to project requirements

## **RANGE OF VARIABLES**

factors include: requirements of daily tasks, environmental factors, sequence of retrieval, weight

	KNOW	/LEDGE
	Learning Outcomes	Learning Objectives
A-3.02.01L	demonstrate knowledge of procedures used to organize materials on site	identify designated areas for storage of materials
		identify designated areas for disposal of waste materials
		identify <i>factors</i> to consider for storing materials and describe <i>storage procedures</i>
		describe procedures used to secure materials
		describe procedures used to dispose of waste materials

#### **RANGE OF VARIABLES**

*factors* include: requirements of daily tasks, environmental factors, sequence of retrieval, weight *storage procedures* include: labels facing out and stacked by size/sequence, materials off the ground and protected from the elements

## **TASK A-4** Uses communication and mentoring techniques

## TASK DESCRIPTOR

Learning in the trades is done primarily in the workplace with tradespeople passing on their skills and knowledge to apprentices, as well as sharing knowledge among themselves. Apprenticeship is, and always has been about mentoring – learning workplace skills and passing them on. Because of the importance of this to the trade, this task covers the activities related to communication in the workplace and mentoring skills.

## A-4.01 Uses communication techniques

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	yes	NV	NV	NV						

	SK	ILLS
	Performance Criteria	Evidence of Attainment
A-4.01.01P	demonstrate communication practices with individuals or in a group	instructions and messages are understood by all parties involved in communication
A-4.01.02P	listen using active listening practices	steps of <i>active listening</i> are utilized
A-4.01.03P	receive and respond to feedback on work	response to feedback indicates understanding and corrective measures are taken
A-4.01.04P	explain and provide feedback	explanation and feedback is provided and task is carried out as directed
A-4.01.05P	use questioning to improve communication	questions are used to enhance understanding, on-the-job training and goal setting
A-4.01.06P	participate in safety and information meetings	meetings are attended, information is relayed to the workforce, and is understood and applied
A-4.01.07P	participate in ongoing training and learning opportunities	ongoing training and learning opportunities are taken
A-4.01.08P	tailor communication style to <i>different</i> <i>audiences</i>	communication style is adapted to different audiences

## **RANGE OF VARIABLES**

*active listening* includes: hearing, interpreting, reflecting, responding, paraphrasing, interpreting body language

different audiences include: generational, customers, peers, regional, cultural

	KNO	DWLEDGE
	Learning Outcomes	Learning Objectives
A-4.01.06L	demonstrate knowledge of trade terminology	define terminology used in the trade
A-4.01.06L demonstrate knowledge of effective communication practices		describe the importance of using effective verbal and non-verbal communication with <b>people in the workplace</b>
		identify <b>sources of information</b> to effectively communicate
		identify communication and <i>learning</i> styles
		describe effective listening and speaking skills
		identify <b>personal responsibilities and</b> <b>attitudes</b> that contribute to on-the-job success
		identify the value of diversity in the workplace
		identify communication that constitutes <i>harassment</i> and <i>discrimination</i>

#### **RANGE OF VARIABLES**

*people in the workplace* include: other tradespeople, colleagues, apprentices, supervisors, clients, authorities having jurisdiction, manufacturers

*sources of information* include: regulations, codes, occupational health and safety requirements, jurisdictional requirements, prints, drawings, specifications, company and client documentation

*learning styles* include: seeing it, hearing it, trying it, applying it

*personal responsibilities and attitudes* include: asking questions, working safely, accepting constructive feedback, time management and punctuality, respect for authority, good stewardship of materials, tools and property, efficient work practice

*harassment* includes: objectionable conduct, comment or display made either on a one-time or continuous basis that demeans, belittles, or causes personal humiliation or embarrassment to the recipient

*discrimination* is prohibited based on: race, national or ethnic origin, colour, religion, age, sex, sexual orientation, marital status, family status, disability or conviction for which a pardon has been granted

## A-4.02

## **Uses mentoring techniques**

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	yes	NV	NV	NV						

	SK	ILLS			
	Performance Criteria	Evidence of Attainment			
A-4.02.01P	identify and communicate learning objective and point of lesson	apprentice or learner can explain the objective and point of the lesson			
A-4.02.02P	link lesson to other lessons and the job	lesson order and unplanned learning opportunities are defined			
A-4.02.03P	demonstrate performance of a skill to an apprentice or learner	steps required to demonstrate a skill are performed			
A-4.02.04P	set up conditions required for an apprentice to practice a skill	<i>practice conditions</i> are set up so that the skill can be practiced safely by the apprentice			
A-4.02.05P	assess apprentice or learner's ability to perform tasks with increasing independence	performance of apprentice or learner improves with practice to a point where skill can be done with little supervision			
A-4.02.06P	give supportive and corrective feedback	apprentice or learner adopts best practice after having been given supportive or corrective feedback			
A-4.02.07P	support apprentices in pursuing technical training opportunities	technical training is completed within timeframe prescribed by apprenticeship authority			
A-4.02.08P	support equity group apprentices	workplace is harassment and discrimination-free			
A-4.02.09P	implement probationary period to assess suitability to the trade	commitment is demonstrated and more suitable career options are suggested if required			

## **RANGE OF VARIABLES**

*steps required to demonstrate a skill* include: understanding the who, what, where, when, why, and how, explaining, showing, giving encouragement, following up to ensure skill is performed correctly *practice conditions* mean: guided, limited independence, full independence

	KNOV	VLEDGE		
	Learning Outcomes	Learning Objectives		
A-4.02.01L	demonstrate knowledge of strategies for learning skills in the workplace	describe the importance of individual experience		
		describe the shared responsibilities for workplace learning		

	determine one's own learning preferences and explain how these relate to learning new skills
	describe the importance of different types of skills in the workplace
	describe the importance of <b>essential</b> <b>skills</b> in the workplace
	identify different <i>learning styles</i>
	identify different <i>learning needs</i> and strategies to meet them
	identify strategies to assist in learning a skill
demonstrate knowledge of strategies for teaching workplace skills	identify different roles played by a workplace mentor
	describe <i>teaching skills</i>
	explain the importance of identifying the point of a lesson
	identify how to choose a good time to present a lesson
	explain the importance of linking the lessons
	identify the components of the skill (the context)
	describe considerations in setting up opportunities for skill practice
	explain the importance of providing feedback
	identify techniques for giving effective feedback
	describe a skills assessment
	identify methods of assessing progress
	explain how to adjust a lesson to different situations
	• •

## **RANGE OF VARIABLES**

essential skills are: reading, writing, document use, oral communication, numeracy, thinking, working with others, digital technology, continuous learning

learning styles include: seeing it, hearing it, trying it, applying it

learning needs include: learning disabilities, learning preferences, language proficiency

*strategies to assist in learning a skill* include: understanding the basic principles of instruction, developing coaching skills, being mature and patient, providing feedback

*teaching skills* include: identifying the point of the lesson, linking the lesson, demonstrating the skill, providing practice, giving feedback, assessing skills and progress

## **TASK A-5 Performs routine trade practices**

## TASK DESCRIPTOR

Insulators (heat and frost) interpret specifications and drawings to understand the project requirements. They calculate measurements and prepare substrates.

## A-5.01 Performs measurements and calculations

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	YT	NU
yes	yes	NV	yes	NV	NV	NV						

		SKILLS						
	Performance Criteria	Evidence of Attainment						
A-5.01.01P	take field measurements using tools	field measurements are taken using <i>tools</i> according to field installation						
A-5.01.02P	calculate layout dimensions of components	layout dimensions of <i>components</i> are calculated using <i>formulas</i>						

## **RANGE OF VARIABLES**

*tools* include: measuring tapes, chalk lines, squares, straight edges, trammel points, levels *components* include: insulation, protective finishes, cladding/jacketing, removable covers, insulation blankets

formulas include: surface area, volume, circumference, diameter, radius

	KNOWLEDGE					
	Learning Outcomes	Learning Objectives				
A-5.01.01L	demonstrate knowledge of measurements and calculations	identify mathematical <b>formulas</b> for calculating dimensions of <b>components</b>				
		identify imperial and metric systems and the conversion from one to the other				

## **RANGE OF VARIABLES**

formulas include: surface area, volume, circumference, diameter, radius

*components* include: insulation, protective finishes, cladding/jacketing, removable covers, insulation blankets

## A-5.02 Interprets specifications and drawings

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	yes	NV	NV	NV						

	SKILLS						
	Performance Criteria	Evidence of Attainment					
A-5.02.01P	read drawings and specifications for <i>factors</i>	drawings and specifications are read for <i>factors</i>					
A-5.02.02P	identify <b>symbols</b> and abbreviations found on drawings	symbols and abbreviations found on drawings are identified					
A-5.02.03P	determine actual dimensions	actual dimensions are determined using tools					
A-5.02.04P	identify specifications	<i>specifications</i> are interpreted and applied					

### **RANGE OF VARIABLES**

*factors* include: directional orientation, location, line numbers, footage, number of fittings, thickness of insulation, types of insulation

*symbols* include: valves, fittings, tees, welds, flanges, unions, elbows, equipment, temperature range, heat trace, change in direction

tools include: tri-scale, electronic measuring tool, highlighters, digital scale measurer

*specifications* include: type of insulation, thickness, jacketing, fasteners, vapour barrier, omittances, band spacing, types of coating, types of sealants, scope of work

	KNOWLEDGE						
	Learning Outcomes	Learning Objectives					
A-5.02.01L	demonstrate knowledge of specifications, types of drawings and drawing components	identify <i>specifications</i> and <i>types of drawings</i> , their application and procedures for use					
		identify <b>symbols</b> and abbreviations found on <b>types of drawings</b>					
		identify <i>drawing components</i>					
		interpret and apply findings from specifications and types of drawings					

## **RANGE OF VARIABLES**

*specifications* include: type of insulation, thickness, jacketing, fasteners, vapour barrier, omittances, band spacing, types of coating, types of sealants, scope of work

*types of drawings* include: civil, architectural, structural, mechanical, electrical, process, isometric *drawing components* include: scales, details, legends, elevations, notes

*symbols* include: valves, fittings, tees, welds, flanges, unions, elbows, equipment, temperature range, heat trace, change in direction

## A-5.03

**Prepares substrates** 

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	yes	NV	NV	NV						

	SKILLS						
	Performance Criteria	Evidence of Attainment					
A-5.03.01P	prepare substrate using <b>tools and</b> equipment	substrate is prepared using <b>tools and</b> <b>equipment</b> to ensure insulation system can be installed according to <b>specifications</b>					
A-5.03.02P	remove <i>contaminants</i> from surface	contaminants are removed from surface using tools and equipment					
A-5.03.03P	grind, pin and weld substrate	substrate is ground, pinned and welded according to <i>specifications</i>					
A-5.03.04P	paint substrate around welded pins	substrate around welded pins is painted to prevent corrosion according to project <i>specifications</i>					

#### **RANGE OF VARIABLES**

*tools and equipment* include: wire brush, scraper, knife, welder *specifications* include: project requirements, manufacturers', engineered *contaminants* include: sealant, debris, oil, corrosion

	KNOWLEDGE						
	Learning Outcomes	Learning Objectives					
A-5.03.01L	demonstrate knowledge of substrates and the procedures used to prepare them for installation of insulation	identify types of <i>substrate material</i> , and the methods used to prepare them					
		identify compatibility of insulating material and substrate based on <i>factors</i>					
		identify types of protrusions, penetrations and irregularities in the substrate					
		describe substrate preparation techniques for installation of insulation					

### **RANGE OF VARIABLES**

*substrate material* includes: steel, copper, galvanized metal, iron, stainless steel, glass, plastic, fibreglass, aluminum

factors include: temperature ranges, age, environment, oxidization, chemical corrosion
# MAJOR WORK ACTIVITY B

# **Performs Industrial Applications**

# **TASK B-6** Prepares for installation of insulation in industrial applications

#### TASK DESCRIPTOR

Insulators (heat and frost) prepare for installing insulation by selecting materials for use depending on the application. They develop a layout, which ensures proper fit and ease of installation.

#### B-6.01

Selects materials for industrial applications

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	yes	NV	NV	NV						

	St	(ILLS
	Performance Criteria	Evidence of Attainment
B-6.01.01P	determine the various components that require insulation	components that require insulation are determined according to project specifications
B-6.01.02P	determine types, sizes and thickness of insulation	types, sizes and thickness of insulation are determined according to specifications, temperature range, mechanical use and equipment size
B-6.01.03P	determine required materials	materials are determined according to specifications or to match existing work or surfaces on renovation and maintenance work
B-6.01.04P	determine types and sizes of cladding	types and sizes of cladding are determined according to <i>factors</i>
B-6.01.05P	calculate amount of insulation and cladding required	amount of insulation and cladding required is calculated to ensure adequate supply and reduce waste
B-6.01.06P	determine fastening system	fastening system is determined according to type of installation and according to specifications

*factors* include: reaction to the environment and other materials that are in contact with the cladding, finished size of insulation, specifications

	KN	OWLEDGE
	Learning Outcomes	Learning Objectives
B-6.01.01L	demonstrate knowledge of material selection for industrial applications	identify types of materials, their application and procedures for use
		locate information pertaining to materials in drawings or specifications
		identify the <i>factors</i> to consider for selecting cladding

#### **RANGE OF VARIABLES**

*factors* include: reaction to the environment and other materials that are in contact with the cladding, finished size of insulation, specifications

#### **B-6.02** Performs layout for industrial applications

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	yes	NV	NV	NV						

		SKILLS
	Performance Criteria	Evidence of Attainment
B-6.02.01P	draw field sketches	field sketches are drawn based on installation requirements
B-6.02.02P	set up work area	work area is set up large enough to accommodate <i>layout</i>
B-6.02.03P	calculate <i>machinery allowances</i>	<i>machinery allowances</i> are calculated to ensure coverage
B-6.02.04P	develop <i>layout</i>	<i>layout</i> is developed using <i>layout tools</i> according to calculated dimensions
B-6.02.05P	mark <i>layout</i>	<i>layout</i> is marked using <i>layout tools</i> to transfer measurements to template
B-6.02.06P	create template	template is created by cutting out layout

layout includes: gores, head segments, transitions, tees, flashing, end caps

*machinery allowances* include: laps, lock-formed seams, easy edges, combination machine (bead and crimp)

*layout tools* include: dividers, squares, tape measures, calculators, scratch awls, markers, trammel points

	KNO	<b>)WLEDGE</b>
	Learning Outcomes	Learning Objectives
B-6.02.01L	demonstrate knowledge of <i>layout</i> procedures for industrial applications	identify <i>layout tools</i> and their procedures for use
		explain calculation used to develop a <i>layout</i>
		describe procedures used to perform a <i>layout</i> for industrial applications

#### **RANGE OF VARIABLES**

*layout* includes: gores, head segments, transitions, tees, flashing, end caps

*layout tools* include: dividers, squares, tape measures, calculators, scratch awls, markers, trammel points

## **TASK B-7** Insulates piping and fittings

#### **TASK DESCRIPTOR**

Insulators (heat and frost) insulate piping and fittings to prevent thermal transmission and to provide personnel protection. Proper fit of insulation around pipes, fittings and hangers is essential to the safe, efficient and cost-effective operation of the industrial process.

#### **B-7.01** Installs insulation on piping, fittings and hangers

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	yes	NV	NV	NV						

		SKILLS
	Performance Criteria	Evidence of Attainment
B-7.01.01P	cut insulation	insulation is cut according to measurements and hanger accommodation
B-7.01.02P	fabricate pipe <i>fittings</i>	pipe <i>fittings</i> are fabricated by measuring, cutting and assembling according to project specifications
B-7.01.03P	secure insulation	insulation and pipe <i>fittings</i> are secured using <i>fasteners</i> and according to <i>factors</i>

#### **RANGE OF VARIABLES**

*fittings* include: valves, tees, transitions, elbows *fasteners* include: wire, bands, adhesive, tape *factors* include: insulation type, thermal expansion, mechanical vibration, project specifications

	KNO	WLEDGE
	Learning Outcomes	Learning Objectives
B-7.01.01L	demonstrate knowledge of procedures used to install insulation on <i>piping</i> , <i>fittings</i> and <i>hangers</i>	identify types of <i>piping, fittings</i> , <i>hangers</i> and application of <i>pipe insulation</i>
		identify <b>specifications</b> and describe their application to the installation of insulation
		describe the <b>results of poor fitting pipe</b> insulation
		describe insulation application techniques
		identify fastening devices and techniques

describe expansion and contraction joint fabrication
describe the procedures used to install insulation on <i>piping, fittings</i> , <i>hangers</i>

*piping* includes: stainless, copper, iron, plastic, fibreglass

fittings include: valves, tees, transitions, elbows

hangers include: shoes, sleeves, clevises

*pipe insulation* includes: fibreglass, calcium silicate, cellular glass, urethane, mineral fibre, elastomeric foam

*specifications* include: scope of work, operating temperature, insulation thickness and requirements *results of poor fitting pipe insulation* include: energy loss, frost build up, personal injury (burns from excess heat or frost)

#### **B-7.02** Applies vapour barrier on piping and fittings

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	yes	NV	NV	NV						

	SK	ILLS
	Performance Criteria	Evidence of Attainment
B-7.02.01P	measure and cut vapour barrier	vapour barrier is measured and cut using <b>tools</b> according to size of insulation
B-7.02.02P	wrap insulated pipe	insulated pipe is wrapped with vapour barrier material, while accommodating for hangers, valves and elbows
B-7.02.03P	apply adhesives and tapes to seams and joints	adhesives and tapes are applied to seams and joints to ensure integrity of the vapour barrier according to <b>specifications</b>
B-7.02.04P	trowel, spray or brush vapour barrier onto insulation	vapour barrier is trowelled, sprayed or brushed onto insulation according to <b>specifications</b> ensuring the integrity of the seal

#### **RANGE OF VARIABLES**

*tools* include: tape measures, knives, scissors, snips, trowels, sprayers *specifications* include: manufacturers', engineered, jurisdictional, Thermal Insulation Association of

Canada (TIAC) Best Practices Guide, Underwriters Laboratories of Canada (ULC), CSA

	KN	OWLEDGE
	Learning Outcomes	Learning Objectives
B-7.02.01L	demonstrate knowledge of vapour barriers, their application and the procedures used for installation	identify types of vapour barriers and describe their characteristics and applications
		describe the importance of vapour barriers on piping and fittings
		identify types of adhesives and their applications
		describe the procedures used to install vapour barriers on piping and fittings
		identify fastening devices and techniques

**B-7.03** Installs cladding, jacketing and finishes on piping and fittings

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	yes	NV	NV	NV						

	SK	ILLS
	Performance Criteria	Evidence of Attainment
B-7.03.01P	cut and shape <i>cladding, jacketing and</i> <i>finishes</i>	<i>cladding, jacketing and finishes</i> are cut and shaped to fit the installed insulation using <i>tools and equipment</i>
B-7.03.02P	secure <i>cladding, jacketing and finishes</i> to installed insulation	<i>cladding, jacketing and finishes</i> are secured to installed insulation using fasteners
B-7.03.03P	apply and shape cement	cement is applied and shaped to match contour of the pipe
B-7.03.04P	apply sealant to seams	sealant is applied to seams as required according to project specifications

#### **RANGE OF VARIABLES**

*cladding, jacketing and finishes* include: stainless steel, aluminum, polyvinyl chloride (PVC), cements, galvanized steel, mastic, reinforced asphalt-based membrane, mass-loaded vinyl (MLV) (barium-impregnated material), self-adhering jacketing tape, weatherproof membranes

tools and equipment include: combination machine, rollers, snips, band tensioners, crimper, sheet metal brake, trowels

	KNO	WLEDGE
	Learning Outcomes	Learning Objectives
B-7.03.01L	demonstrate knowledge of <i>cladding,</i> <i>jacketing and finishes</i> , their purpose and application	identify types of <i>cladding, jacketing and finishes</i> , and describe their characteristics and applications
		identify <i>fasteners</i> and their characteristics and applications
B-7.03.02L	demonstrate knowledge of procedures used to install <i>cladding, jacketing</i> <i>and finishes</i> on insulated piping and <i>fittings</i>	describe procedures used to install <i>cladding, jacketing and finishes</i> on insulated piping and <i>fittings</i>

*cladding, jacketing and finishes* include: stainless steel, aluminum, polyvinyl chloride (PVC), cements, galvanized steel, mastic, reinforced asphalt-based membrane, mass-loaded vinyl (MLV) (barium-impregnated material), self-adhering jacketing tape, weatherproof membranes *fasteners* include: screws, banding, PVC glue, tacks, tape, rivets *fittings* include: tees, transitions, elbows, end caps

### **TASK B-8** Insulates tanks, vessels and equipment

#### TASK DESCRIPTOR

Insulators (heat and frost) insulate tanks, vessels and equipment, including instrumentation, to regulate temperature and prevent condensation. Tanks include crude oil, liquefied natural gas and asphalt tanks. Vessels are pressurized and include desalters, aerators and crackers. Equipment includes boilers, pumps, reactors and columns/towers.

#### **B-8.01** Installs insulation on tanks, vessels and equipment

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	yes	NV	NV	NV						

		SKILLS
	Performance Criteria	Evidence of Attainment
B-8.01.01P	determine dimensions	dimensions are determined by field measuring or referencing <i>drawings</i>
B-8.01.02P	cut insulation	insulation is cut according to measurements and protrusions using <i>fabricating tools</i>
B-8.01.03P	fabricate <i>components</i>	<i>components</i> are fabricated by measuring and cutting using <i>fabricating tools</i> according to project <i>specifications</i>

B-8.01.04P	apply insulation with <i>fasteners</i>	insulation is applied using <i>fastening</i> to <i>factors</i> according to <i>factors</i>
B-8.01.05P	assemble <i>components</i> on large scale equipment	<i>components</i> are assembled on large scale equipment using temporary holding devices to hold insulation in place then secured using <i>fastening tools</i> and <i>fasteners</i> ensuring adequate support

drawings include: blueprints, isometrics, detailed drawings, elevation

fabricating tools include: hand saws, band saws, knives, dividers, tape measures

components include: head segments, manways, supports, expansion (slip) joints

*specifications* include: location of pins and studs, types and spacing of banding, expansion springs *fasteners* include: chokers, bands, adhesives, tapes, pins, clips

*fastening tools* include: end nippers, band tensioners, crimpers, temporary holding devices (rubber bands, bungee cords, inner tube, rope)

factors include: insulation type, thermal expansion, mechanical vibration, project specifications

	KNO	WLEDGE
	Learning Outcomes	Learning Objectives
B-8.01.01L	demonstrate knowledge of insulating tanks, vessels and equipment	identify <b>types of insulation</b>
		identify types of <i>tanks, vessels</i> and <i>equipment</i> that require insulation
		identify hazards associated with various types of insulation
		apply basic geometry related to insulating <i>tanks, vessels</i> and <i>equipment</i>
		explain <i>tank</i> , <i>vessel</i> and <i>equipment</i> expansion and contraction
B-8.01.02L	demonstrate knowledge of procedures used to install insulation on <i>tanks</i> , <i>vessels</i> and <i>equipment</i>	describe procedures used to install insulation on <i>tanks, vessels</i> and <i>equipment</i>
		identify <b>specifications</b> related to installing insulation on <b>tanks, vessels</b> and <b>equipment</b>

#### **RANGE OF VARIABLES**

tanks include: crude oil, liquefied natural gas, asphalt tanks

vessels include: desalters, aerators, crackers, exchangers

equipment includes: boilers, pumps, turbines

*types of insulation* include: fibreglass, cellular glass, mineral fibre, calcium silicate, urethane, nano-like technology

specifications include: location of pins and studs, types and spacing of banding, expansion springs

#### **B-8.02** Applies vapour barrier on tanks, vessels and equipment

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	yes	NV	NV	NV						

	SK	(ILLS
	Performance Criteria	Evidence of Attainment
B-8.02.01P	measure and cut <i>vapour barrier</i>	<b>vapour barrier</b> is measured and cut using <b>tools</b> according to size of insulation to fit <b>vapour barrier</b> over top of insulation
B-8.02.02P	wrap <b>vapour barrier</b> around insulation and apply adhesive	<i>vapour barrier</i> is wrapped around insulation and adhesive is applied according to <i>specifications</i>
B-8.02.03P	trowel and brush <i>vapour barrier</i> onto insulation	<b>vapour barrier</b> is trowelled and brushed onto insulation according to application while ensuring the integrity of the seal
B-8.02.04P	tape seams of insulation	seams of insulation are taped according to <b>specifications</b>

#### **RANGE OF VARIABLES**

*vapour barrier* includes: mastics, all service jacket (ASJ), foil scrim kraft (FSK), reinforced foil flame retardant kraft (RFFRK), blue skin, pitt wrap

tools include: tape measures, knives, scissors, trowels, brushes

specifications include: manufacturers', engineered, jurisdictional, TIAC Best Practices Guide, ULC, CSA

	KN	OWLEDGE
	Learning Outcomes	Learning Objectives

B-8.03.06P	apply sealant to seams	sealant is applied to seams as required according to project specifications					

#### **RANGE OF VARIABLES**

*components* include: head segments, rings, transitions, end caps, laterals, flashing, inspection port *tools and equipment* include: combination machine, rollers, snips, band tensioners, crimper, easy edger, lock former, dividers, trammel points, sheet metal brake

*cladding, jacketing and finishes* include: stainless steel, aluminum, PVC, cements, weatherproof membranes

*fasteners* include: screws, banding, PVC glue, tacks, tape, rivets, temporary holding devices, expansion springs, S-clips, belt loops

tanks include: crude oil, liquefied natural gas, asphalt tanks

vessels include: desalters, aerators, crackers

equipment includes: boilers, pumps, turbines

	KNOV	KNOWLEDGE					
	Learning Outcomes	Learning Objectives					
B-8.03.01L demonstrate knowledge of <i>cladding,</i> <i>jacketing and finishes</i> , their purpose and application		identify types of <i>cladding, jacketing and finishes</i> , and describe their properties and applications					
		identify <i>fasteners</i> and their characteristics and applications					
B-8.03.02L	demonstrate knowledge of procedures to install <i>components</i> on <i>tanks, vessels and equipment</i>	describe procedures to install components on tanks, vessels and equipment					

*cladding, jacketing and finishes* include: stainless steel, aluminum, PVC, cements, weatherproof membranes

*fasteners* include: screws, banding, PVC glue, tacks, tape, rivets, temporary holding devices, expansion springs, S-clips, belt loops

*components* include: head segments, rings, transitions, end caps, laterals, flashing, inspection port *tanks* include: crude oil, liquefied natural gas, asphalt tanks

vessels include: desalters, aerators, crackers

equipment include: boilers, pumps, turbines

# MAJOR WORK ACTIVITY C Performs Commercial Applications

# **TASK C-9** Prepares for installation of insulation in commercial applications

#### TASK DESCRIPTOR

Commercial systems are insulated for a variety of reasons such as condensation prevention, energy savings, personnel protection or soundproofing. Therefore, knowledge of the different insulating materials and their applications is important to achieve the desired result.

Commercial systems incorporate a variety of irregular-shaped components such as pipes, ducts and equipment; therefore, it is important for the insulator (heat and frost) to perform layout for different patterns.

#### **C-9.01** Selects materials for commercial applications

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	yes	NV	NV	NV						

	SK	ILLS
	Performance Criteria	Evidence of Attainment
C-9.01.01P	determine the various components of plumbing and mechanical systems that require insulation	various components of plumbing and mechanical systems that require insulation are determined according to project <b>specifications</b>
C-9.01.02P	determine type, location and size of insulation <i>materials</i> required	type and size of insulation is determined depending on temperature range, mechanical use and equipment size; <i>materials</i> required are determined to match existing work or surfaces on renovation and maintenance work according to <i>specifications</i>
C-9.01.03P	calculate the amount of <i>materials</i> needed to accomplish project	amount of <i>materials</i> needed to accomplish project are calculated according to blueprints, <i>specifications</i> and site conditions

*specifications* include: manufacturers', engineered, jurisdictional, TIAC Best Practices Guide, ULC, CSA, supervisory personnel and other associated trades

*materials* include: insulation, cladding, jacketing and finishes, fittings, vapour barriers, soundproofing materials, fasteners, sealants

	KNC	OWLEDGE
	Learning Outcomes	Learning Objectives
C-9.01.01L	demonstrate knowledge of material selection for commercial applications	identify <b>types of insulation</b> , their commercial applications and procedures for use
		identify types of <i>cladding, jacketing and finishes</i> , their commercial applications and procedures for use
		identify types of <i>vapour barriers</i> , their commercial applications and describe their importance and procedures for use
		identify hazards of <i>materials</i> and locations as they pertain to selecting materials for commercial applications
		apply basic geometry related to material selection for commercial applications

#### **RANGE OF VARIABLES**

*types of insulation* include: preformed pipe covering, fibreglass (rigid board, flexible blankets/batts), mineral fibre, elastomeric foam, insulation cement

*cladding, jacketing and finishes* include: PVC, stainless steel, aluminum, canvas, weatherproof membranes

vapour barriers include: RFFRK, FSK facing, mastics, ASJ, membrane barriers, films

*materials* include: insulation, cladding, jacketing and finishes, fittings, vapour barriers, soundproofing materials, fasteners, sealants

#### **C-9.02 Performs layout for commercial applications**

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	yes	NV	NV	NV						

	SKILLS				
	Performance Criteria	Evidence of Attainment			
C-9.02.01P	set up work area	work area is set up large enough to accommodate layout			
C-9.02.02P	develop patterns for <i>components</i>	patterns are developed for <i>components</i> using <i>layout tools</i> based on calculated dimensions			

C-9.02.03P	mark layout	layout is marked using <i>layout tools</i> to transfer measurements to materials
C-9.02.04P	create template	template is created by cutting out layout

*components* include: tees, valves, elbows, laterals, square to round, gores, reducers *layout tools* include: dividers, squares, tape measures, calculators, knives, aviation snips, notchers, scratch awls, markers, trammel points

	KNOV	VLEDGE
	Learning Outcomes	Learning Objectives
C-9.02.01L	demonstrate knowledge of procedures used to lay out <i>materials</i> for commercial applications	identify <i>materials</i> to be laid out for commercial applications
		identify <b>types of insulation</b> , their commercial applications and procedures for use
		identify types of <i>cladding, jacketing and finishes</i> , their commercial applications and procedures for use
		identify types of <i>vapour barriers</i> , their commercial applications and describe their importance and procedures for use
		apply basic geometry related to layout of materials for commercial applications
		describe procedures used to develop patterns for <i>components</i>
		describe procedures used to lay out <i>materials</i> for commercial applications

#### **RANGE OF VARIABLES**

*materials* include: insulation; cladding, jacketing and finishes, fittings, vapour barriers, soundproofing materials, fasteners, sealants

*types of insulation* include: preformed pipe covering, fibreglass (rigid board, flexible blankets/batts), mineral fibre, elastomeric foam, insulation cement

*cladding, jacketing and finishes* include: PVC, stainless steel, aluminum, canvas *vapour barriers* include: RFFRK, ASJ, PMC (Protective & Marine Coatings), FSK, mastics *components* include: tees, valves, elbows, laterals, square to round, gores, reducers

## TASK C-10 Insulates plumbing and mechanical piping systems

#### TASK DESCRIPTOR

Insulators (heat and frost) insulate plumbing systems such as domestic hot and cold water, rainwater leaders and vent piping. Mechanical piping systems include steam, condensate, heating lines and chilled water. They are insulated for thermal, freeze protection and condensation as well as for personnel safety.

#### **C-10.01** Installs insulation on plumbing and mechanical piping systems

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	yes	NV	NV	NV						

	SKILLS					
	Performance Criteria	Evidence of Attainment				
C-10.01.01P	cut pre-formed and flexible insulation	pre-formed and flexible insulation is cut according to measurements to accommodate hangers, valves and elbows				
C-10.01.02P	fabricate pipe fittings	pipe fittings are fabricated by measuring, cutting and assembling according to project specifications				
C-10.01.03P	secure insulation to piping systems	insulation is secured to piping systems using <i>fasteners</i> according to <i>specifications</i>				

#### **RANGE OF VARIABLES**

*fasteners* include: self-seal laps, tape, wire, banding, staples, adhesives *specifications* include: engineered, manufacturers', jurisdictional, TIAC Best Practices Guide

	KNOWLEDGE				
	Learning Outcomes	Learning Objectives			
C-10.01.01L demonstrate knowledge of procedures used to install insulation on <i>plumbing</i> and <i>mechanical piping systems</i>		identify <b>plumbing systems</b> , their characteristics and insulation requirements			
		identify <i>mechanical piping systems</i> , their characteristics and insulation requirements			
		identify pre-formed products, their application and procedures for use			

identify fastening devices and techniques
describe the procedures used to install insulation on <i>plumbing</i> and <i>mechanical piping systems</i>

*plumbing systems* include: hot, cold, recirculation water, rainwater leaders, vent piping, sanitary drains *mechanical piping systems* include: heating, chilled water, refrigeration

#### **C-10.02** Applies vapour barrier on insulated plumbing and mechanical piping systems

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	yes	NV	NV	NV						

	SK	ILLS
	Performance Criteria	Evidence of Attainment
C-10.02.01P	measure and cut vapour barrier material	vapour barrier material is measured and cut using <i>tools</i>
C-10.02.02P	wrap insulated pipe	insulated pipe is wrapped while accommodating for hangers, valves and elbows
C-10.02.03P	apply adhesives and tapes to seams and joints	adhesives and tapes are applied to seams and joints to ensure integrity of the seal
C-10.02.04P	trowel, spray or brush vapour barrier onto insulation	vapour barrier is trowelled, sprayed or brushed onto insulation according to <b>specifications</b> ensuring the integrity of the seal

#### **RANGE OF VARIABLES**

*tools* include: knives, scissors, snips, brushes, trowels *specifications* include: engineered, manufacturers', TIAC Best Practices Guide, jurisdictional

	KNOV	VLEDGE
	Learning Outcomes	Learning Objectives
C-10.02.01L	demonstrate knowledge of <i>vapour</i> <i>barriers</i> , their characteristics and applications and the procedures used for installation	identify types of <i>vapour barriers</i> and describe their characteristics and applications
		describe the importance of vapour barriers on plumbing and mechanical piping systems
		identify <i>plumbing systems</i> and describe their characteristics

identify <i>mechanical piping systems</i> and describe their characteristics
describe the procedures used to install vapour barriers on <i>plumbing</i> and <i>mechanical piping systems</i>
identify types of adhesives and their applications
identify fastening devices and techniques

vapour barriers include: ASJ, RFFRK, PMC, mastics

*plumbing systems* include: hot, cold, recirculation water, rainwater leaders, vent piping, sanitary drains *mechanical piping systems* include: heating, chilled water, refrigeration, glycol

# **C-10.03** Installs cladding, jacketing and finishes on insulated plumbing and mechanical piping systems

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	yes	NV	NV	NV						

	SK	ILLS
	Performance Criteria	Evidence of Attainment

## TASK D-13 Installs fire stop systems

#### TASK DESCRIPTOR

Fire stopping is designed to compartmentalize fire to one area so that it is easily contained for protection of life, safety and property. It is applied to the structure, building and structural penetrations. It acts as a smoke seal to prevent noxious fumes and smoke from spreading to adjacent areas. All fire stop systems must be installed according to the manufacturer-specific techniques and training requirements.

#### D-13.01 Identifies approved fire stop system

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	yes	NV	NV	NV						

	SKI	LLS
	Performance Criteria	Evidence of Attainment
D-13.01.01P	identify fire rating of structures and the <i>materials</i> they are made of	fire rating is identified according to drawings and specifications
D-13.01.02P	identify the <i>penetrating components</i> and their characteristics	<i>penetrating components</i> are identified according to drawings and specifications
D-13.01.03P	take <i>measurements</i> of annular space	measurements are taken and noted
D-13.01.04P	refer to system guidelines to select fire stop system	fire stop system is appropriate for application according to drawings, specifications and manufacturers' system specifications

#### **RANGE OF VARIABLES**

materials include: wood, concrete, steel, drywall, brick, stone

*penetrating components* include: pipes, duct systems, wall, roof and floor joints, electrical conduit, wires and trays

measurements include: depth, width, length, volume

	KNO	WLEDGE
	Learning Outcomes	Learning Objectives
D-13.01.01L demonstrate knowledge of fire stop systems for architectural, structural, mechanical and electrical components		describe purpose and reasons for different types of fire stop applications
		identify <i>measurements</i> and calculations required for fire stop systems
		identify regulations pertaining to fire stop system installation
		identify types of <i>fire stop materials</i> used in fire stop systems

measurements include: depth, width, length, volume

*fire stop materials* include: caulking, wrap strips, intumescent boards and collars, bricks, pillows, putty, mortar, mineral fiber, foams, cement

# **D-13.02** Applies fire stop materials to architectural, structural, mechanical and electrical components

fasteners include: pins, adhesives, perforated hangers

### **TASK D-15 Installs removable covers**

#### TASK DESCRIPTOR

Removable covers are used to minimize heat loss and protect personnel. They also provide fast and easy access to fittings and equipment for maintenance or inspection. Insulators (heat and frost) are responsible for the layout and fabrication of the covers, usually in a shop environment. They must also fit and fasten the covers in the field.

#### **D-15.01** Fabricates removable covers

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	yes	NV	NV	NV						

	SK	ILLS
	Performance Criteria	Evidence of Attainment
D-15.01.01P	draw field sketches	field sketches are drawn according to type of installation
D-15.01.02P	lay out covers	covers are laid out making allowances for laps, lock-formed seams and easy edges, using <i>layout tools</i>
D-15.01.03P	fabricate soft covers	soft covers are fabricated using tools
D-15.01.04P	install fastening devices for soft covers	fastening devices for soft covers are installed according to site specifications
D-15.01.05P	fabricate hard covers	hard covers are fabricated using tools
D-15.01.06P	cut, install, secure and seal insulation in removable covers	insulation is cut, installed, secured and sealed in removable covers according to site specifications
D-15.01.07P	install <b>fastening devices for hard</b> covers	fastening devices for hard covers are installed according to site specifications

#### **RANGE OF VARIABLES**

*layout tools* include: dividers, scratch awls, levels, tape measures, trammel points, squares *tools used to fabricate soft covers* include: C-ring pliers, stitch staplers, sewing machines, shears *fastening devices used for soft covers* include: lacing anchors, D-rings, hook and loop, draw strings or wire

tools used to fabricate hard covers include: sheet metal brake, lockformer, easy edgers, hand and power tools

fastening devices used for hard covers include: rivets, suitcase latches, screws, hinges, banding

	KNO	WLEDGE
	Learning Outcomes	Learning Objectives

yes	yes	NV	yes	NV	NV	NV						

	SKILLS						
	Performance Criteria	Evidence of Attainment					
E-20.02.01P	cut <b>vapour barrier material</b>	<i>vapour barrier material</i> is cut according to specifications					
E-20.02.02P	wrap insulated pipe with <i>vapour barrier material</i>	insulated pipe is wrapped with <b>vapour</b> <b>barrier material</b> , while accommodating for hangers, valves and elbows					
E-20.02.03P	apply adhesives and tape to seams and joints	adhesives and tape are applied to seams and joints to ensure integrity of the seal					
E-20.02.04P	complete application of vapour barrier	vapour barrier application is completed by using <i>methods</i> according to project specifications					

### **RANGE OF VARIABLES**

*vapour barrier material* includes: films, laminates, metals, mastics, sealants *methods* using: applying mastics, applying adhesives, applying tapes

	KNOWLEDGE					
	Learning Outcomes	Learning Objectives				
E-20.02.01L	demonstrate knowledge of the application of vapour barrier on insulated <i>components</i> of cryogenic systems	identify types of <i>vapour barrier material</i> and describe their importance, characteristics and applications				
		describe the importance of accurate measurements in cryogenic applications				

E-20.02.02L	demonstrate knowledge of the procedures used to apply vapour barrier on insulated <i>components</i> of cryogenic systems	identify vapour barrier requirements
		describe <i>methods</i> used to apply <i>vapour</i>

barrier material on insulated components of cryogenic systems

#### **RANGE OF VARIABLES**

*components* include: pipes, equipment, vessels, tanks *vapour barrier material* includes: films, laminates, metals, mastics, sealants *methods* using: applying mastics, applying adhesives, applying tapes

### **E-20.03** Installs cladding, jacketing and finishes to cryogenic systems

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	yes	NV	NV	NV						

	SKILLS						
	Performance Criteria	Evidence of Attainment					
E-20.03.01P	cover insulated components in cryogenic applications with <i>cladding, protective jacketing and finishes</i>	insulated components in cryogenic applications are covered with <i>cladding,</i> <i>protective jacketing and finishes</i> to provide protection of insulation system					
E-20.03.02P	secure <i>cladding, protective jacketing</i> and finishes	cladding, protective jacketing and finishes are secured using fasteners					
E-20.03.03P	apply sealant to seams	sealant is applied to seams as required according to project specifications					

### **RANGE OF VARIABLES**

*cladding, protective jacketing and finishes* include: aluminum, stainless steel, PVC, mastic *fasteners* include: banding, adhesives, latches

	KNOWLEDGE						
	Learning Outcomes	Learning Objectives					
E-20.03.01L	demonstrate knowledge of the procedures used to install <i>cladding, protective</i> <i>jacketing and finishes</i> to cryogenic systems	identify types of <i>cladding, protective</i> jacketing and finishes					
		describe procedures used to install <i>cladding, protective jacketing and finishes</i> to cryogenic systems					
		identify types of <b>fasteners</b> used to install <b>cladding, protective jacketing and</b> <b>finishes</b> to cryogenic systems					

*cladding, protective jacketing and finishes* include: aluminum, stainless steel, PVC, mastic *fasteners* include: banding, adhesives, latches

### TASK E-21 Insulates for marine applications (Not Common Core)

### **TASK DESCRIPTOR**

Bulkheads, deckheads and hulls in marine applications may be insulated for thermal integrity, fire proofing and noise attenuation. Insulators (heat and frost) also work on piping, ducting, fire stopping and exhaust pipes on marine applications. The activities covered in this task are those unique to marine applications.

### E-21.01 Insulates bulkheads, deckheads and hulls (Not Common Core)

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	yes	yes	no	no	no	no	yes	NV	NV	NV

	SKILLS				
	Performance Criteria	Evidence of Attainment			
E-21.01.01P	apply welded pins to bulkheads, deckheads and stiffeners	welded pins are applied to bulkheads, deckheads and stiffeners according to project specifications			
E-21.01.02P	apply z-bar to stiffeners	z-bar is applied to stiffeners for fireproofing bulkheads using powder- actuated tools according to project specifications			

E-21.01.03P	cut insulation	insulation is cut using <i>cutting tools</i> according to measurements, penetrations, protrusions and irregular shapes to accommodate insulation
E-21.01.04P	apply and position insulation	insulation is applied and positioned according to measurements, penetrations, protrusions and irregular shapes
E-21.01.05P	secure insulation with <i>fasteners</i> on pins	insulation is secured with <i>fasteners</i> on pins according to insulation type, thermal expansion, mechanical vibration and project specifications
E-21.01.06P	seal seams and clips with tape	seams and clips are sealed with tape according to project and manufacturers' specifications
E-21.01.07P	install and secure wire mesh or perforated metal over insulation	wire mesh or perforated metal is installed and secured over insulation using <i>fasteners</i> according to project specifications

*cutting tools* include: hand saws, knives *fasteners* include: dome caps, washers, speed clip

	KNOWLEDGE						
	Learning Outcomes	Learning Objectives					
E-21.01.01L	demonstrate knowledge of insulating bulkheads, deckheads and hulls	identify types of <i>cutting tools</i> and procedures used to cut insulation					
		define terminology related to marine applications					
		identify <b>specifications</b> related to marine applications					
		describe procedures used to fasten insulation					
		describe procedures used to fasten wire mesh					
		identify <i>fire-rated systems</i> used to fireproof bulkheads, deckheads and hulls					

### **RANGE OF VARIABLES**

*cutting tools* include: hand saws, knives *specifications* include: coast guard, project, manufacturers', ULC *fire-rated systems* include: A60, A90, H120

# **E-21.02** Installs cladding, jacketing and finishes on marine applications (Not Common Core)

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	yes	yes	no	no	no	no	yes	NV	NV	NV

	SKILLS						
	Performance Criteria	Evidence of Attainment					
E-21.02.01P	apply fibreglass cloth to deckhead and bulkhead insulation	fibreglass cloth is applied to deckhead and bulkhead insulation					
E-21.02.02P	apply top coat of lagging adhesive to fibreglass cloth	top coat of lagging adhesive is applied to fibreglass cloth to seal pores					
E-21.02.03P	apply protective perforated metal finish over insulation and secure with <i>fasteners</i>	protective perforated metal finish is applied over insulation and secured with <i>fasteners</i>					
E-21.02.04P	install metal cladding over insulation and secure to z-bar with <i>fasteners</i>	metal cladding is installed over insulation and secured to z-bar using <i>fasteners</i> according to project specifications					

### **RANGE OF VARIABLES**

fasteners include: dome caps, washers, clips, rivets, screws

	KNOWLEDGE				
	Learning Outcomes	Learning Objectives			
E-21.02.01L	demonstrate knowledge of the procedures used to install <i>cladding, protective</i> <i>jacketing and finishes</i> on marine applications	identify types of <i>cladding, protective</i> <i>jacketing and finishes</i> on marine applications			
		describe procedures used to install <i>cladding, protective jacketing and</i> <i>finishes</i> on marine applications			
		identify types of <i>fasteners</i> used to install <i>cladding, protective jacketing and</i> <i>finishes</i> on marine applications			

### **RANGE OF VARIABLES**

*cladding, protective jacketing and finishes* include: stainless steel, aluminum, fibreglass cloth *fasteners* include: dome caps, washers, clips, rivets, screws

# MAJOR WORK ACTIVITY F

## Performs Asbestos, Lead and Mould Abatement

## **TASK F-22 Prepares for asbestos abatement**

### TASK DESCRIPTOR

Because of the severe health risks associated with asbestos-related products, any potential for airborne contamination must be mitigated. Extreme precautions must be taken in preparation for removal or encapsulation of asbestos.

# **F-22.01** Determines required personal protective equipment (PPE) for asbestos abatement

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	yes	NV	NV	NV						

	SKILLS			
	Performance Criteria	Evidence of Attainment		
F-22.01.01P	determine level of risk	level of risk is determined according to the classification of asbestos abatement		
F-22.01.02P	select PPE	PPE is selected according to the classification of asbestos abatement		

### **RANGE OF VARIABLES**

*classifications of asbestos abatement* are: type I, II, III; low, moderate, high *PPE* includes: respirators, disposable coveralls, gloves, disposable booties, eye protection

	KNOWLEDGE			
	Learning Outcomes	Learning Objectives		
F-22.01.01L	demonstrate knowledge of <b>PPE</b> used for asbestos abatement, their applications and procedures for use	identify <i>classifications of asbestos</i> <i>abatement</i>		
		identify types of <b>PPE</b> used for asbestos abatement		
		describe applications and limitations of <b>PPE</b> used for asbestos abatement		

		identify decontamination requirements for <b>PPE</b> used with asbestos abatement
		identify storage, cleaning and maintenance for <b>PPE</b>
F-22.01.02L	demonstrate knowledge of regulations pertaining to asbestos abatement	identify and implement the health and safety <b>regulations</b> and responsibilities with respect to asbestos abatement
		identify and implement the health and safety <i>regulations</i> and responsibilities with respect to the use of <i>PPE</i> for asbestos abatement

**PPE** includes: respirators, disposable coveralls, gloves, disposable booties, eye protection *classifications of asbestos abatement* are: type I, II, III; low, moderate, high *regulations* include: Occupational Health and Safety (OH&S), WHMIS, jurisdictional

### F-22.02 Retrieves sample of asbestos for testing

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	YT	NU
yes	yes	NV	yes	NV	NV	NV						

	SKILLS					
	Performance Criteria	Evidence of Attainment				
F-22.02.01P	treat all bulk samples as positive for asbestos until proven otherwise	all bulk samples are treated as positive for asbestos until proven otherwise				
F-22.02.02P	isolate area from public access while taking sample	area is isolated from public access while taking sample				
F-22.02.03P	take sample	sample is taken using <i>sampling tools</i> while minimizing disturbance to the substance to avoid making the asbestos friable				
F-22.02.04P	document sampling information	sampling information is documented according to laboratory specifications and jurisdictional regulations				
F-22.02.05P	identify and apply temporary seal	temporary seal is identified and applied to encapsulate location from where sample was taken				

### **RANGE OF VARIABLES**

*sampling tools* include: glove bags, hand tools, spray bottle with amended water, sample bag *sampling information* includes: date and time taken, line number, who took the sample, location, chain of evidence

	KNO	WLEDGE
	Learning Outcomes	Learning Objectives
F-22.02.01L	demonstrate knowledge of retrieving sample of asbestos	identify <i>materials used for temporary</i> enclosures
		identify types of temporary enclosures
		identify types of containment devices for asbestos samples
		identify <b>sampling information</b> required to document sample
		identify the types of asbestos and their characteristics
		identify procedures for collection of samples
F-22.02.02L	demonstrate knowledge of <i>regulations</i> pertaining to asbestos abatement	identify and implement the health and safety <b>regulations</b> and responsibilities with respect to the removal of asbestos and containment sites
		describe personal health and medical issues relating to asbestos

materials used for temporary enclosures include: studs and polyethylene, control cubes

temporary enclosures include: glove bags, barriers, hoarding

*sampling information* includes: date and time taken, line number, who took the sample, location, chain of evidence

regulations include: OH&S, WHMIS, jurisdictional

### **F-22.03** Determines scope of work

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	YT	NU
yes	yes	NV	yes	yes	yes	yes	yes	yes	no	NV	NV	NV

	SKILLS				
	Performance Criteria	Evidence of Attainment			
F-22.03.01P	determine amount of asbestos to be removed, enclosed or encapsulated	amount of asbestos to be removed, enclosed or encapsulated is determined according to sample results and project scope			
F-22.03.02P	assess level of risk	level of risk is assessed according to the classification of asbestos abatement			
F-22.03.03P	select <i>materials</i> required for abatement	<i>materials</i> required for abatement are selected according to type and form of asbestos application			

F-22.03.04P	select <b>tools and safety equipment</b> required for abatement	<i>tools and safety equipment</i> are selected according to type and form of asbestos application			
F-22.03.05P	determine disposal method of contaminated waste	disposal method of contaminated waste is determined according to environmental and jurisdictional regulations			

classifications of asbestos abatement are: type I, II, III; low, moderate, high

materials include: polyethylene, studs, tape, adhesive, fasteners

*tools and safety equipment* include: manometer, aviation snips, negative air machines, glove bags, High Efficiency Particulate Air (HEPA) vacuum, fall protection equipment, PPE

	KNOWLEDGE				
	Learning Outcomes	Learning Objectives			
F-22.03.01L	demonstrate knowledge of determining scope of work required for asbestos abatement	identify <i>classifications of asbestos</i> <i>abatement</i>			
		identify materials required for abatement			
		identify <i>tools and safety equipment</i> required for abatement			
F-22.03.02L	demonstrate knowledge of <i>regulations</i> pertaining to asbestos abatement	identify and implement the health and safety <i>regulations</i> and responsibilities with respect to the disposal of asbestos and <i>other products</i>			

### **RANGE OF VARIABLES**

classifications of asbestos abatement are: type I, II, III; low, moderate, high

*materials* include: polyethylene, studs, tape, adhesive, fasteners

tools and safety equipment include: manometer, aviation snips, negative air machines, glove bags,

High Efficiency Particulate Air (HEPA) vacuum, fall protection equipment, PPE

regulations include: OH&S, WHMIS, jurisdictional

other products include: disposable coveralls, filters, gloves, rags

### **F-22.04** Prepares site for removal and containment of asbestos

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	yes	NV	NV	NV						

	SK	(ILLS
	Performance Criteria	Evidence of Attainment
F-22.04.01P	determine requirements for decontamination	requirements for decontamination are determined according to type of removal
F-22.04.02P	segregate area	area is segregated using asbestos signage at all access points pertaining to asbestos removal type
F-22.04.03P	pre-clean work area	work area is pre-cleaned according to regulations and type of removal
F-22.04.04P	plan access routes for disposal	access routes for disposal are planned considering <i>factors</i>
F-22.04.05P	locate requirements for decontamination for high risk removals	requirements for decontamination are located for high risk removals according to <b>regulations</b>
F-22.04.06P	display documentation of hazard assessment	documentation of hazard assessment is displayed according to <i>regulations</i>

### **RANGE OF VARIABLES**

*regulations* include: OH&S, WHMIS, jurisdictional *factors* include: clean and clear line of sight, shortest distance possible

	KNOW	LEDGE		
	Learning Outcomes	Learning Objectives		
F-22.04.01L	demonstrate knowledge of preparing site for removal and containment of asbestos	identify <i>regulations</i> pertaining to the requirements for decontamination		
		describe the procedures used to secure work area		
F-22.04.02L	demonstrate knowledge of <i>regulations</i> pertaining to the removal and containment of asbestos	identify and implement the <i>regulations</i> and responsibilities with respect to the removal and containment of asbestos		

### **RANGE OF VARIABLES**

### F-22.05 Builds temporary enclosure

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	yes	NV	NV	NV						

	St	(ILLS
	Performance Criteria	Evidence of Attainment
F-22.05.01P	construct sealed containment area	sealed containment area is constructed using <i>materials</i>
F-22.05.02P	set up ground-fault circuit interrupter (GFCI) panel	GFCI panel is set up for power supply to temporary lighting, negative air machine and hot water tanks
F-22.05.03P	maintain decontamination facilities	decontamination facilities are maintained by keeping the area clean, monitoring and maintenance
F-22.05.04P	determine location of negative air machines and establish levels	location of negative air machine is determined and levels are established according to jurisdictional regulations
F-22.05.05P	ensure there is a backup negative air machine in case of failure	backup negative air machine is present and in working order

### **RANGE OF VARIABLES**

materials include: polyethylene, studs, tape, adhesives, fasteners

	KNOW	/LEDGE
	Learning Outcomes	Learning Objectives
F-22.05.01L demonstrate knowledge of building temporary enclosure		identify <i>materials</i> used to construct containment area
		identify types of temporary enclosures
		identify equipment used in asbestos abatement
		determine required number of negative air machines and their locations
F-22.05.02L	demonstrate knowledge of electrical safety pertaining to asbestos abatement	identify electrical safety risks
F-22.05.03L	demonstrate knowledge of <i>regulations</i> pertaining to the containment of asbestos	identify and implement <i>regulations</i> and responsibilities with respect to the containment of asbestos

*materials* include: polyethylene, studs, tape, adhesives, fasteners *temporary enclosures* include: glove bags, barriers, hoarding *regulations* include: OH&S, WHMIS, jurisdictional

### **TASK F-23 Performs asbestos removal procedures**

### **TASK DESCRIPTOR**

Asbestos must be removed with extreme caution and according to regulations.

### F-23.01 Removes asbestos

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	yes	NV	NV	NV						

	SK	ILLS
	Performance Criteria	Evidence of Attainment
F-23.01.01P	wet and wash down asbestos-related products with amended water	asbestos-related products are wetted and washed down with amended water using an airless sprayer so asbestos is not friable
F-23.01.02P	use glove bags or enclosure	glove bags or enclosure are used to allow removal of the asbestos with <i>tools</i> according to <i>regulations</i>
F-23.01.03P	maintain negative air pressure according to <i>regulations</i>	negative air pressure is maintained from operation and continuous monitoring and maintenance
F-23.01.04P	maintain asbestos removal equipment	asbestos removal equipment is maintained by changing filters
F-23.01.05P	place asbestos in double bags and seal the bags	asbestos is placed in bags according to double bag procedures, labelled and sealed by goosenecking and taping

#### **RANGE OF VARIABLES**

*tools* include: HEPA vacuum, hoses, wire brushes, scrapers, knives, snips, airless spray machines, shovels, brooms

	KNOW	/LEDGE
	Learning Outcomes	Learning Objectives
F-23.01.01L	demonstrate knowledge of procedures used for removing asbestos	describe methods used for asbestos removal
		identify types of <i>tools</i> and equipment used for asbestos removal
		describe method used to take an air sample
		describe procedures used for hot and cold removal
F-23.01.02L	demonstrate knowledge of <i>regulations</i> pertaining to the removal of asbestos	identify and implement the <b>regulations</b> and responsibilities with respect to the removal of asbestos

*tools* include: HEPA vacuum, hoses, wire brushes, scrapers, knives, snips, airless spray machines, shovels, brooms

regulations include: OH&S, WHMIS, jurisdictional

F-23.02	Disposes of asbestos materials
---------	--------------------------------

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	yes	NV	NV	NV						

	SK	ILLS
	Performance Criteria	Evidence of Attainment
F-23.02.01P	decontaminate bags of asbestos	bags of asbestos are decontaminated in preparation for disposal and transport
F-23.02.02P	carry bags of asbestos using a clean and clear line of sight to designated area	bags of asbestos are carried to designated area according to <i>regulations</i>
F-23.02.03P	verify vehicle transporting asbestos has warning placards	vehicle transporting asbestos has warning placards posted according to jurisdictional regulations
F-23.02.04P	transport bags of asbestos to disposal location	bags of asbestos are transported to disposal location according to <b>regulations</b>
F-23.02.05P	unload bags of asbestos at disposal location	bags of asbestos are unloaded at disposal location according to facility safe work practice

### **RANGE OF VARIABLES**

	KNOWLEDGE			
	Learning Outcomes	Learning Objectives		
F-23.02.01L	demonstrate knowledge of procedures used for disposal of asbestos	describe methods used for disposal of asbestos		
		identify precautions required for removal		
F-23.02.02L	demonstrate knowledge of <i>regulations</i> pertaining to the disposal of asbestos	identify and implement the <i>regulations</i> and responsibilities with respect to the disposal of asbestos		

regulations include: OH&S, WHMIS, jurisdictional

### F-23.03 Performs decontamination of area and equipment

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	yes	NV	NV	NV						

	SKILLS				
	Performance Criteria	Evidence of Attainment			
F-23.03.01P	wet down asbestos-related products with amended water	asbestos-related products are wetted with amended water to ensure there is no friable asbestos			
F-23.03.02P	apply encapsulant to site and area after removal of asbestos	encapsulant is applied to site and area after removal of asbestos using <b>tools and</b> equipment			
F-23.03.03P	wash down and clean <i>tools and</i> equipment with amended water	tools and equipment are washed down and cleaned with amended water before removal from the site			
F-23.03.04P	follow personnel decontamination procedures	personnel decontamination procedures are followed according to classification of asbestos abatement			
F-23.03.05P	remove and dispose of temporary enclosures	temporary enclosures are removed and disposed of according to <i>regulations</i>			
F-23.03.06P	re-establish site to original condition	site is re-established to original condition			

### **RANGE OF VARIABLES**

*tools and equipment* include: airless sprayer, pump sprayer, shower system, waste water filter system, disposal bags, HEPA vacuum

	KNOWLEDGE				
	Learning Outcomes	Learning Objectives			
F-23.03.01L	demonstrate knowledge of procedures used for decontaminating area and equipment	describe procedures used to decontaminate area			
		describe procedures used to decontaminate equipment			
		describe procedures used to decontaminate personnel			
		describe method used to take an air sample			
F-23.03.02L	demonstrate knowledge of <i>regulations</i> pertaining to the decontamination of area and equipment	identify and implement the <i>regulations</i> and responsibilities with respect to the decontamination of area and equipment			

regulations include: OH&S, WHMIS, jurisdictional

### **TASK F-24 Performs maintenance and repair**

### TASK DESCRIPTOR

If asbestos is deemed to be encapsulated or enclosed, the asbestos must be contained so that the fibres do not become friable. Enclosing asbestos involves boxing it in with material such as metal or drywall. Encapsulating the asbestos entails applying variations of penetrating sealants, sprays, jacketing or lagging canvas to asbestos to prevent airborne contaminants.

### F-24.01 Encapsulates asbestos

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	yes	NV	NV	NV						

	SKILLS		
	Performance Criteria	Evidence of Attainment	
F-24.01.01P	select encapsulant materials	encapsulant materials are selected according to task at hand	
F-24.01.02P	prepare encapsulant	encapsulant is prepared according to manufacturers' specifications	

F-24.01.03P	apply encapsulant	encapsulant is applied according to manufacturers' specifications using <i>tools and equipment</i>
F-24.01.04P	label encapsulated area with asbestos warning label	encapsulated area is labelled with asbestos warning label

*encapsulant materials* include: mastic, jacketing, sealants, coatings *tools and equipment* include: airless sprayer, brush, cutting tools, trowels

	KNOWLEDGE				
	Learning Outcomes	Learning Objectives			
F-24.01.01L demonstrate knowledge of procedurused to encapsulate asbestos		identify situations that require encapsulating asbestos			
		identify types of encapsulant materials			
		identify types of <b>tools and equipment</b> used to apply <b>encapsulant materials</b>			
		describe procedures used to apply encapsulant materials			
F-24.01.02L	demonstrate knowledge of <i>regulations</i> pertaining to the encapsulation of asbestos	identify and implement the <i>regulations</i> and responsibilities with respect to the encapsulation of asbestos			
		explain the purpose of labelling encapsulated area with asbestos warning			

#### **RANGE OF VARIABLES**

*encapsulant materials* include: mastic, jacketing, sealants, coatings *tools and equipment* include: airless sprayer, brush, cutting tools, trowels *regulations* include: OH&S, WHMIS, jurisdictional

### **F-24.02** Encloses asbestos

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	yes	NV	NV	NV						

	SKILLS			
	Performance Criteria	Evidence of Attainment		
F-24.02.01P	determine <i>method of repair</i>	<i>method of repair</i> is determined according to <i>factors</i>		
F-24.02.02P	design and build permanent enclosure around asbestos	permanent enclosure around asbestos is designed and built using <i>materials</i>		

F-24.02.03P	seal all seams	seams are sealed to ensure the enclosure is air tight
F-24.02.04P	verify enclosure is structurally sound	enclosure is structurally sound according to good building practices
F-24.02.05P	label enclosure with asbestos warning labels and post warnings at all entries	enclosure is labelled with asbestos warning labels and warnings are posted at all entries according to <i>regulations</i>

*method of repair* includes: boxing, covering, taping *factors* include: type of asbestos, abatement classification, size of project *materials* include: drywall, plywood, aluminum, studs, fasteners *regulations* include: OH&S, WHMIS, jurisdictional

	KNOWLEDGE			
	Learning Outcomes	Learning Objectives		
F-24.02.01L	demonstrate knowledge of procedures used to enclose asbestos	identify situations that require enclosing asbestos		
		determine <i>method of repair</i> based on <i>factors</i>		
		identify types of <i>materials</i> used to build enclosure around asbestos		
F-24.02.02L	demonstrate knowledge of <i>regulations</i> pertaining to the enclosure of asbestos	identify and implement the <i>regulations</i> and responsibilities with respect to the enclosure of asbestos		
		explain the purpose of labelling enclosure with asbestos warning		

### **RANGE OF VARIABLES**

*method of repair* includes: boxing, covering, taping *factors* include: type of asbestos, abatement classification, size of project *materials* include: drywall, plywood, aluminum, studs, fasteners *regulations* include: OH&S, WHMIS, jurisdictional

### **TASK F-25 Performs lead abatement and mould remediation**

### **TASK DESCRIPTOR**

There are known health risks associated with products that contain lead or are contaminated with mould. Extra precautions must be taken in lead abatement and mould remediation.

### F-25.01 Performs lead abatement

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	no	NV	no	yes	yes	yes	yes	yes	yes	NV	NV	NV

	SKILLS				
	Performance Criteria	Evidence of Attainment			
F-25.01.01P	arrange for identification of lead and content	lead and content are identified by third party in parts per million			
F-25.01.02P	identify the scope of lead abatement and disturbance	scope of lead and abatement and disturbance are identified according to project scope			
F-25.01.03P	identify <b>PPE</b>	PPE is identified according to task at hand			
F-25.01.04P	remove identified lead	lead is removed according to jurisdictional guidelines			
F-25.01.05P	complete lead disposal	lead disposal is completed according to jurisdictional guidelines			
F-25.01.06P	test area to ensure successful lead abatement	air or contact sampling is completed and measured to ensure successful lead abatement according to jurisdictional guidelines			
F-25.01.07P	re-establish worksite to original condition	worksite is re-established to original condition			

### **RANGE OF VARIABLES**

PPE includes: respirators and filters, gloves, disposable coveralls, booties

	KNOWLEDGE			
	Learning Outcomes	Learning Objectives		
F-25.01.01L	demonstrate knowledge of lead, its health risks and abatement procedures	identify lead and its health risks		
		identify health and safety exposure limits		
		identify jurisdictional guidelines		
		identify lead abatement procedures		
		, 1		

### F-25.02 Performs mould remediation

NL	NS	PE	NB	QC	ON	MB	SK	AB	BC	NT	ΥT	NU
yes	yes	NV	no	yes	yes	yes	yes	yes	no	NV	NV	NV

	SKILLS				
	Performance Criteria	Evidence of Attainment			
F-25.02.01P	arrange for identification of mould and type	mould and type are identified by third party			
F-25.02.02P	identify scope of mould remediation and/or clean-up	scope of mould remediation and/or clean- up are identified			
F-25.02.03P	identify <b>PPE</b>	<b>PPE</b> is identified based on scope of mould remediation and/or clean-up			
F-25.02.04P	perform mould remediation	mould remediation is performed according to jurisdictional guidelines			
F-25.02.05P	complete mould disposal	mould disposal is completed according to jurisdictional guidelines			
F-25.02.06P	test area to ensure successful mould remediation	samples are completed and measured to jurisdictional guidelines to ensure successful mould remediation			
F-25.02.07P	encapsulate porous <i>substrate</i>	porous <i>substrate</i> is encapsulated			
F-25.02.08P	re-establish worksite to original condition	worksite is re-established to original condition			

### **RANGE OF VARIABLES**

**PPE** includes: respirators, rubber gloves, disposable coveralls, rubber boots **substrates** include: drywall, wood, canvas, insulation, concrete, soil

	KNOWLEDGE				
	Learning Outcomes	Learning Objectives			
F-25.02.01L	demonstrate knowledge of mould remediation, its health risks and procedures for remediation	identify mould remediation and its health risks			
		identify health and safety exposure limits			
		identify jurisdictional guidelines			
		identify mould remediation procedures			
		identify environment and <i>substrates</i> that support mould growth			

### **RANGE OF VARIABLES**

substrates include: drywall, wood, canvas, insulation, concrete, soil

## APPENDIX A ACRONYMS

ASJ	all service jacket
CAD	computer assisted drawing
CNC	Computer Numerical Control
CSA	Canadian Standards Association
FSK	foil scrim kraft
GFCI	ground-fault circuit interrupter
HEPA	high efficiency particulate air
HT	high-temperature
HVAC	heating, venting and air conditioning
LEED	Leadership in Energy and Environmental Design
MEK	methyl ethyl ketone
MLV	mass-loaded vinyl
OH&S	Occupational Health and Safety
PMC	Protective & Marine Coatings
PPE	personal protective equipment
PVC	polyvinyl chloride
RFFRK	reinforced foil flame retardant kraft
TIAC	Thermal Insulation Association of Canada
TSP	trisodium phosphate
ULC	Underwriters Laboratories of Canada
VOC	volatile organic compound
WHMIS	Workplace Hazardous Materials Information System
WIP	work in progress

## APPENDIX B TOOLS AND EQUIPMENT

### Hand Tools / Outils à main

aviation snips (M1, M2, M3) band tensioners (ratchet, pistol, jacks, sealers, tighteners) brooms bull snips bungee cords caulking guns chisels clamps duck bill pliers (hand brakes, folding pliers) end nippers foam guns hammers hog ring pliers/C-ring pliers knives and sheaths levels locking pliers notchers paint brushes paint rollers pliers rakes rasps rivet guns rubber bands saws (keyhole and hand) scissors scrapers scratch awls screwdrivers shovels staple guns (flare, standard, hammer)

tape measure thickness gauges tie-down straps tool pouches trowels (pointer and flat) whitney punch wire brush

cisailles de type aviation (M1, M2, M3) tendeurs de bandes (rochet, pistolet, crics, produits d'étanchéité, tendeurs) balais cisailles à long manche tendeurs élastiques pistolets à calfeutrer burins brides pinces à bec-de-canard (sertisseuses manuelles droites, pinces plieuses) pinces coupantes en bout pistolets à mousse marteaux pinces pour anneau ouvert couteaux et étuis niveaux pinces-étaux encocheuses pinceaux rouleaux à peinture pinces râteaux râpes pistolets à riveter bande de caoutchouc scies (à lame étroite et à main) ciseaux grattoirs pointes à tracer tournevis pelles pistolets agrafeurs (pneumatique, standard, marteau agrafeur) ruban à mesurer jauges d'épaisseur sangles porte-outils truelles (pointues et plates) emporte-pièce brosse métallique

### Power Tools / Outils mécaniques

circular saws drills (cordless and electric) extension cords grinders jig saws mitre saws mixers (paddle/aerator drills) nibblers pin guns pin welders pneumatic tools powder-actuated tools pump sprayers stud guns stud welders torches (roofing, tiger)

### Equipment / Équipement

band cutting machines band saws brakes electric combination machines electric rollers electric shears foot operated shears (guillotine) High Efficiency Particulate Air (HEPA) vacuum lock formers manual combination machines (beader/crimper)

manual easy edgers manual roller (slip, non-slip) mixers (hopper, cement) negative air machines safety edge machines (seamers, bar folders)

sewing machines slitters

### Layout Equipment / Outils de traçage

calculators chalk lines circumference rule circumference tape compasses dividers felt pens levels mitre charts trammel points scies circulaires perceuses (électriques avec et sans fil) rallonges électriques meuleuses scies sauteuses scies à onglets mélangeurs (à palettes de mélange, à aérateur) grignoteuse pistolets de soudage de goujons soudeuses à tiges de métal outils pneumatiques outils à charge explosive pulvérisateurs à pompe machines à goujons soudeuses de goujons chalumeaux (toitures, buses)

machines à couper les bandes scies à ruban plieuses de feuilles machines à former universelles électriques rouleaux électriques cisailles électriques cisailles à pédale (guillotine) aspirateur à filtre HEPA machines à former des agrafes machines à former universelles manuelles (machine à boudiner et à sertir) machines à finir les bords manuelles rouleau manuel (à glissement, antidérapant) mélangeurs (trémie, à ciment) appareil à air négatif machines à faconner les bords de sécurité (sertisseuses, barres à souder) machines à coudre refendeuses en long

calculatrices cordeaux à craie règle de circonférence ruban circonférentiel compas compas à pointes sèches crayons-feutres niveaux tableaux des segments pointes de compas à verge

### Spray Equipment / Équipement de pulvérisation

airless sprayers froth packs hopper guns hoses nozzles spray pumps sprayers tip cleaners pistolets-pulvérisateurs sans air mousse d'étanchéité Froth-Pak pistolets à trémie tuyaux flexibles becs pompes de pulvérisation pulvérisateurs nettoyeurs de buse

### Access Equipment / Équipement d'accès

aerial lifts aerial platforms garage creepers ladders rope access scaffolding scissor lifts swing stages nacelles élévatrices plateformes élévatrices sommiers roulants échelles accès par corde échafaudage plateformes élévatrices à ciseaux échafaudages volants

## Personal Protective Equipment (PPE) and Safety Equipment / Équipement de protection individuelle (EPI) et équipement de sécurité

chemical suits disposable booties disposable masks disposable, impervious coveralls eye protection (goggles, safety glasses)

eye wash stations face shields fall arrest equipment fire and chemical resistant coveralls

first aid kits gloves hard hats hearing protection heat stress aids knee pads radiation protection suits

reflective vests respirators and filters safety boots traction aids travel restraint equipment warning tapes wet bulb thermometers wristlets

combinaisons chimiques couvre-chaussures jetables masques jetables combinaisons imperméables jetables protecteurs oculaires (lunettes-masque, lunettes de sécurité) douches oculaires écrans faciaux équipement de protection antichute combinaisons résistantes au feu et aux produits chimiques trousses de premiers soins gants casques de sécurité protecteurs d'oreilles trousses de contrainte thermique aenouillères combinaisons de protection contre les rayonnements gilets à bandes réflectrices appareils respiratoires et filtres bottes de sécurité dispositifs d'adhérence équipement de restriction des déplacements rubans de signalisation thermomètres à bulbe humide serre-poignets

## APPENDIX C GLOSSARY / GLOSSAIRE

abatement	to become less severe or widespread; in this analysis, refers to asbestos, lead removal, enclosure or encapsulation in order to minimize health risks	désamiantage	action de réduire la quantité d'amiante; dans la présente norme, ce terme se rapporte à l'enlèvement, au confinement et à l'encapsulage de l'amiante pour en réduire les risques pour la santé
acoustic	sound absorption	acoustique	absorption sonore
amended water	water to which a surfactant (wetting agent) has been added to increase the ability to penetrate the asbestos insulation	eau contenant un surfactant	eau dans laquelle un surfactant (agent mouillant) a été ajouté pour augmenter la capacité à pénétrer l'isolant d'amiante
barium-impregnated material	dense material used in soundproofing	matériau imprégné de baryum	matériau dense utilisé en insonorisation
bulkhead	any vertical partition separating compartments on a ship	cloison	toute séparation verticale servant à diviser les compartiments d'un navire
cladding	covering applied to insulation as a protective or decorative cover	revêtement	gaine posée sur l'isolant pour le couvrir (protection ou décoration)
deckhead	under side of a ship's deck viewed from below the ceiling	plafond (maritime)	sous-face d'un pont d'un navire vue d'en dessous
encapsulate	applying sealants or sprays to prevent airborne contaminants	encapsuler	appliquer des scellants ou des produits à vaporiser pour éviter les contaminants atmosphériques
enclose	to box in, using materials such as metal or drywall	confiner	murer avec du matériel comme du métal ou des plaques de plâtre
fire stopping	compartmentalizing to prevent spread of smoke, gases and fire	coupe-feu	qualité de ce qui empêche la propagation de la fumée et du feu
fireproofing	protecting material from burning	ignifugation	traitement qui vise à protéger le matériau contre le feu

foil scrim kraft (foil skin)	layered reinforcing consisting of a outer aluminium foil with fibreglass scrim (fibres) in the centre and an inner layer of kraft paper; it is applied to the insulation and comes in rolls to tape seams in insulation	papier métallisé (pellicule en aluminium)	renfort stratifié dont l'extérieur est composé d'un papier en aluminium, le centre d'armure de fibre de verre et la couche intérieure de papier kraft; on l'applique à l'isolant; le produit se vend en rouleau et sert à coller les joints du matériau isolant
goosenecking	fastening a garbage bag then folding the top down over itself and fastening again, resembling the shape of a goose's neck	pratiquer un nœud en « col de cygne »	attacher fermement un sac à ordures, puis replier sur elle-même la partie du haut vers le bas et attacher fermement de nouveau; le nœud formé a la forme d'un col de cygne
gores	pieces of flat jacketing material fabricated to cover an elbow part or head segment of the insulation system	goussets	pièces de matériau plat de chemisage faites pour recouvrir un coude ou un segment de tête du système d'isolation
head segments	pieces of insulation material fabricated to cover a dome shape part of the insulation system	segment de tête	pièces de matériau isolant faites pour recouvrir une forme en coupole du système d'isolation
lags	mitred sections of flat insulating material cut to form a specific shape	segments isolants	sections à onglet de matériau isolant qui sont coupées de façon à obtenir une forme spécifique
plenum	enclosed portion of a structure designed to allow air movement	plénum	partie fermée d'une structure conçue pour le mouvement de l'air
remediation	to become less severe or widespread; in this analysis, refers to mould removal, enclosure or encapsulation in order to minimize health risks	élimination	rendre la propagation moins importante ou la limiter; dans cette norme, il est question de l'enlèvement, du confinement ou de l'encapsulage de la moisissure afin de minimiser les risques pour la santé
soundproofing	sound damping or deadening	insonorisation	amortissement ou absorption du son
stud and rail	fastening system for insulation and cladding on equipment such as tanks and boilers	goujon et traverse	système de fixation de l'isolant et du revêtement sur de l'équipement comme des réservoirs et des chaudières
vessel	pressurized container such as propane tanks, exchangers, cylinder tanks	récipient	contenant sous pression comme les réservoirs de propane, les échangeurs, les bouteilles, les réservoirs

watershed installation or fabrication technique used to prevent water entering into the insulation	imperméabilisation	technique de pose ou de façonnage utilisée pour empêcher l'eau de pénétrer dans l'isolant
----------------------------------------------------------------------------------------------------------	--------------------	-------------------------------------------------------------------------------------------------
